I. INTRODUCTION

This Stormwater Pollution Prevention Plan (SWPPP) has been prepared pursuant to the August, 2010, New York State Department of Environmental Conservation (NYSDEC) Stormwater Management Design Manual (the Manual), the NYSDEC General Permit for Stormwater Discharges GP-0-10-001, the New York City Department of Environmental Protection (NYCDEP) Watershed Rules and Regulations and Chapter 193 of the Town of North Salem Town Code. Pursuant to Section 402 of the Clean Water Act, stormwater discharges from construction activities to waters of the United States are unlawful unless they are authorized by a NPDES (National Pollutant Discharge Elimination System) permit or by a state permit program. New York State's SPDES (State Pollutant Discharge Elimination System) is a NPDES-approved program with permits issued in accordance with the NYS Environmental Conservation Law. It is also noted that under Chapter 193 of the Town Code the Town of North Salem Planning Board must also approve the SWPPP.

Current regulations require that a Notice of Intent (NOI) be submitted to the NYSDEC Division of Water; 625 Broadway, 4th Floor, Albany, New York, 12233-3505 (refer to Appendix H) five days prior the onset of construction. The NOI requires a SWPPP be developed to address water quality control, water quantity control and erosion and sediment control during construction.

The proposed Stormwater Management Practices (SMPs) specified in this SWPPP would maintain relatively similar peak discharge rates and significantly reduce post construction increases in pollutant loadings in the post-construction condition by capturing and treating the runoff from the new impervious surfaces and other disturbed areas to the greatest extent possible. This plan meets the requirements of the NYSDEC for Erosion and Sediment Control, as well as Water Quality and Quantity control, ensuring minimal impact to downstream waters. Mapping and stormwater calculations were provided by Keane Coppelman Gregory Engineers, P.C.

The Proposed Action is a 42 single family and 76 multi-family unit development on approximately 160 acres in the Town of North Salem, Westchester County, New York. The development planned consists of residences and ancillary facilities including swimming pools, and community buildings. Site construction elements for the project consist of new roadways, dwellings, and associated infrastructure. The stormwater runoff from the new impervious surfaces would be directed to stormwater management facilities which have been designed in accordance with the New York State Department of Environmental Conservation (NYSDEC) Stormwater Design Manual (latest edition), herein after the "manual".

This SWPPP is required by GP-0-10-001 and the Watershed Regulations (as amended April 4, 2010), because the project will disturb more than 5,000 square feet.

II. BACKGROUND

A. Site Location

The proposed project (tax map parcels Sheet 2, Block 11734, Lots 15, 16, 19 and 20) is a residential subdivision of 160 acres of land fronting Reed Road in the Town of North Salem, Westchester County, New York. It forms the bulk of the vacant land at the northwestern corner of Interstate I-684 at exit 8 (Hardscrabble Road). The property is located in the

phosphorus-restricted Muscoot Reservoir Watershed of New York City. Refer to Figure 1 for the Vicinity Map and Figure 2 for the Site Location Map.

The owner/operator is: JOFLO of North Salem, 525 Main Street, New Rochelle, New York 10801.

B. Purpose

The purpose of this SWPPP is to maintain water quality by preventing turbidity during construction and post development increases in suspended solids, colloidal and settleable solids, residuals from oil and floating substances, and other potential pollutants and to reduce increases in peak stormwater discharge rates to pre-developed rates. Potential stormwater impacts and mitigation measures associated with this Project have been identified through the quantification of stormwater runoff characteristics on the site for the existing and developed conditions.

C. Site Characteristics and Drainage

1. Existing Conditions

Refer to Appendix A for the Pre-Development Site Drainage Map. The site is predominately wooded. A review of the State and federal wetland maps indicate that there are federal and Town regulated wetlands but no NYSDEC regulated freshwater wetlands on the site. The existing condition includes 4.2 acres of impervious surfaces (mostly associated with rock outcrops and exposed bedrock).

The 160 acre site has approximately 153 acres of uplands and 7.0 acres of wetlands present (4 percent of the site). The site wetlands are dominantly wooded swamps and palustrine systems with the largest (Wetland A) being an emergent marsh with hardwood swamp boundary. The entire site drains to the Croton River. The remainder of the site consists of slightly disturbed, secondary growth, upland forest. The Highgate-Woodlands site topography is predominately rolling to steep, with a number of rock outcrops. The maximum elevation, 640 feet, occurs in the western portion of the site. The minimum elevation, 348 feet, occurs in the southern portion of the site.

The Croton River is located in the New York City East-of-Hudson Croton Watershed, where the Environmental Protection Agency (EPA) has established a Total Maximum Daily Load (TMDLs) for phosphorus (Muscoot Reservoir). The burden for reducing current phosphorous loading to achieve the TMDL presently lies with the Town of North Salem and its regional partners. The program for phosphorous reduction has been established in the NYSDEC draft document entitled *Croton Watershed Phase II Phosphorous TMDL Nonpoint Source Implementation Plan* (TMDL Implementation Plan) latest draft January 14, 2009. This plan clearly states that for simplicity and ease of local government administration the plan is largely structured to use existing programs to achieve reductions. These programs include:

- Potential additional point source reductions.
- NYSDEC SPDES General Permit for Stormwater Discharges for Municipal Separate Stormwater Sewer Systems (MS4s) Permit No. GP-0-08-002.
- State and regional source control and agricultural programs.

The Highgate-Woodlands project is consistent with the TMDL Implementation Plan and applicable portions of the above-cited programs. As discussed above the Highgate-Woodlands project is located in the Muscoot Reservoir. Looking more closely at the project site, twelve design points can be identified representing points where stormwater runoff leaves the project site to be conveyed downstream to the reservoir system. The design points identified represent points on existing collection systems and have been selected as to minimize the amount of off-site area tributary to the design point. By selecting points meeting this criteria it allows for the most effective evaluation of any potential quantitative impacts associated with the proposed improvements. Below is a brief summary of the twelve drainage areas on the project site. Refer to Appendix A for the location of each design point, and illustration of their respective tributary areas.

Drainage Area Aa (Design Point 1A) drains 15.93 acres of upland deciduous forest to a roadside swale along Reed Road. This area contains slopes greater than 30 percent. DP1A is a 24” CMP under Reed Road at the low point of the swale.

Drainage Area Ab (Design Point 1B) drains 1.94 acres of upland deciduous forest to a roadside swale along Reed Road. This area contains slopes greater than 30 percent. DP1B is a 24” CMP under Reed Road at the low point of the swale.

Drainage Area B (Design Point 2) drains 8.82 acres of upland forest south to a swale along Route 22. DP2 is a low point at the southern property line above the edge of the swale along Hardscrabble Road.

Drainage Area C (Design Point 3) drains 6.43 acres of forested land south towards Sun Valley Drive. DP3 is the northern edge of the cul-de-sac at Sun Valley Drive.

Drainage Area D (Design Point 4) drains 6.59 acres of forested land on the western side of the property south towards Sun Valley Heights Road. DP4 is a low point at the property corner off Sun Valley Heights Road.

Drainage Area E (Design Point 5) drains 1.81 acres of upland forest and forested wetland in the center of the project site. DP5 is a low point at an existing natural drainageway at the property line upgradient of Close Hill Road.

Drainage Area F (Design Point 6) drains 6.40 acres of forested land in the northwest portion of the property. Drainage in this area flows north to Juengst Road, an unmarked road off of Hillside Avenue. DP6 is a low point at the property line in the northwest corner of the property, at a driveway off of Juengst Road.

Drainage Area G (Design Point 7) drains 37.92 acres of upland forest in the west-central section of the project site. Drainage is collected by an intermittent stream within the forested wetland that flows to the north and west. DP7 is an 18" culvert at Juengst Road.

Drainage Area H (Design Point 8) drains 10.87 acres of forested upland to the northwest corner of the project site. DP8 is a low point at the northern property line south of Route 22.

Drainage Area I (Design Point 9) drains 2.52 acres of forested upland located in the northeast corner of the property. Drainage from this area flows north off of the project site. DP9 is a low point along the northern property line at the top of an existing natural drainage way.

Drainage Area J (Design Point 10) drains 2.91 acres of upland forest along the eastern edge of the project site. Drainage from this section flows off site to the roadside swale along Reed Road. DP10 is a low point at the eastern property line east of the Deak property.

Drainage Area K (Design Point 11) drains 64.17 acres of upland forest along the eastern and central portions of the project site. Drainage is conveyed to the south by an intermittent stream that originates in a vernal pool complex and flows to an emergent marsh. From the marsh, water is conveyed east off of the property by a perennial stream that ultimately drains to an unnamed tributary of the Croton River. DP11 is a 24" CMP under an existing driveway off Reed Road.

The soil types, as mapped and described by the United States Department of Agriculture and the Soil Conservation Service in the Soil Survey of Putnam and Westchester County, 1989, have been identified on the property and include Chatfield soils dominating the site, with Charlton and Leicester loam soils present remaining majority of the site. The soil map in Appendix I identifies the predominant soil types within the project site. These soils have a hydrological classification as primarily 'B' and 'C' soils. Group B soils having a moderately low runoff potential due to moderate infiltration rates. These soils consist primarily of moderately deep to deep, moderately well to well drained soils with moderately fine to moderately coarse textures.

Group C Soils having a moderately high runoff potential due to slow infiltration rates. These soils consist primarily of soils in which a layer exists near the surface that impedes the downward movement of water or soils with moderately fine to fine texture. Refer to Appendix I for a Custom Soil Resource Report.

Based on topography depicted on the USGS Croton Falls Quad Map (Figure 2) the ultimate receiving water body was determined to be the Croton River/Muscoot Reservoir System.

2. Developed Condition

Refer to Appendix B for the Post-Development Site Drainage Map. The Proposed Action would involve the construction of new roadways, dwellings, driveways, community amenities as well as stormwater management facilities. Under the developed condition, the site would have approximately 19.0 acres of impervious area; 140.5 of the 159.5 acres would either remain undisturbed or be restored to a vegetated state (e.g. lawns, planting beds, woodland). No disturbance to the federal wetland is proposed with this Project.

All of the proposed development will be directed to a stormwater management system consisting of open and closed channel conveyance systems, and stormwater management practices designed to treat water quality as well as attenuate water quantity in accordance with local, city, and state regulations. It should also be noted that as the site design progresses an examination of Better Site Design techniques and source controls will be employed to further enhance the proposed Stormwater Pollution Prevention Plan (SWPPP) for the project. This will include runoff volume reduction techniques as described later in this document.

The same twelve design points identified in the previous section will be evaluated in the post-development quantity analysis (refer to Appendix B). Further discussions on the site analysis, as well as the stormwater management practices and techniques utilized to mitigate any stormwater impacts from the proposed Highgate-Woodlands project, are provided below.

After development of the site the size and drainage paths of the existing drainage areas would be maintained as much as possible, while utilizing best management practices such as grass filter strips, vegetated swales and water quality ponds to capture and treat runoff from impervious surface areas. The final grading and drainage plan would be designed to ensure that stormwater runoff from all new impervious surfaces and other disturbed areas is captured and treated by the proposed stormwater management facilities. In some instances, stormwater runoff from the dwelling rooftops and parking areas of the site would be conveyed to underground infiltration galleys (Cultec units) and dry wells, proposed to be located under the proposed parking areas and/or the grassed areas between units. In other cases where fill soils or slopes are an issue, rain gardens, pervious pavement and other practices will be used. The submitted plans show the conceptual locations of these practices; final placement and sizing will be completed following additional soils testing and final site plan design. Green infrastructure practices, which are now an integral part of SWPPP's, are discussed in more detail below. All stormwater management facilities would be or have been designed in accordance with the NYS Stormwater Management Design Manual guidelines and criteria. Details of the design criteria for these practices are included in the HydroCad data provided.

D. Flooding Conditions

As shown on Figure 3 there are no areas identified on the subject property that are in any Federal Emergency Management Agency (FEMA) Flood Designated Zone. Accordingly, a post-development flooding analysis has not been conducted as a part of the stormwater model.

III. STORMWATER MANAGEMENT

The proposed stormwater management system for the Highgate-Woodlands project has been designed to meet the requirements of local, city, and state stormwater ordinances and guidelines, including but not limited to those of the NYSDEC, the Town of North Salem and the NYCDEP. Since the subject project proposes the disturbance of more than 5,000 square feet, coverage under the New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit No. GP-0-10-001 is required.

In order to meet the requirements set forth by this permit, the latest edition of the NYSDEC *New York State Stormwater Management Design Manual* (NYSSMDM), including Chapter 10 *Enhanced Phosphorus Removal Standards*, was referenced for the design of the proposed stormwater management system. This manual specifies five design criteria that are discussed in detail below. They are Water Quality Volume, Runoff Reduction Volume, Stream Channel

PANEL
0056F

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of equalling or exceeding in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A**
No Base Flood Elevations determined.
- ZONE AE**
Base Flood Elevations determined.
- ZONE AH**
Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO**
Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR**
Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99**
Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V**
Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE**
Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- ZONE X**
Areas determined to be outside the 0.2% annual chance floodplain.
- ZONE D**
Areas in which flood hazards are undetermined, but possible.
- COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS**
- OTHERWISE PROTECTED AREAS (OPAs)**

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

Western Project Site Boundary

NOTE: A portion of the project site is mapped on Panel 56 as shown. The remainder of the site is located on Panel 57, which is not published by FEMA

Figure 3: FEMA Flood Insurance Rate Map

Scale: As shown

Protection Volume, Overbank Flood Control, and Extreme Storm Control. The first of the requirements relates to treating water quality, while the latter pertain to stormwater quantity (peak flow) attenuation. To address stormwater quantity requirements of both the NYSDEC and NYCDEP, the stormwater modeling system, by HydroCAD Software Solutions LLC in Tamworth, New Hampshire, was used to model and assess the peak stormwater flows for the subject project. HydroCAD is a computer aided design program for modeling the hydrology and hydraulics of stormwater runoff. It is based primarily on hydrology techniques developed by the United States Department of Agriculture, Soil Conservation Service (USDA, SCS) TR-20 method combined with standard hydraulic calculations. For details on the input data for the subcatchments and design storms, please refer to Appendix D. The input requirements for the HydroCAD computer program are as follows:

- Subcatchments (contributing watershed/sub-watersheds)
- Design storm rainfall in inches
- CN (runoff curve number) values which are based on soil type and land use/ground cover
- Tc (time of concentration) flow path information
- Stormwater Basins
- Surface area at appropriate elevations
- Flood elevation
- Outlet structure information

The above is a general description of the input data used to calculate the pre- and post-development stormwater runoff values. For detailed information for each drainage area and pond, see Appendix D.

A. Methodology

1. Water Quality Volume and Channel Protection Volume

Stormwater quality and quantity has been analyzed in accordance with the guidelines set forth in the New York State General Permit for Stormwater Discharge, GP-0-10-001 (Appendix F). Generally, the water quality volume (WQv) is designed to capture and treat 90% of the average annual stormwater runoff volume. However, because the subject project is located in the New York City East-of-Hudson Croton Watershed, which is listed as a phosphorus-limited watershed, the stormwater management practices have been designed in accordance with the *Enhanced Phosphorus Removal Standards* (Chapter 10) of the NYSSMDM to the extent practicable. These standards, adopted in April of 2008, require that the water quality volume be calculated using a 1-year storm event (3.1 inches in Westchester County) rather than the 90% rainfall event previously used (in this case, 1.15 inches). This essentially triples the volume required for capture and treatment.

In order to treat the required WQv from the proposed development, a number of different practices have been provided throughout the site; Micropool Extended Detention Basins (P-1), Infiltration Trenches (I-1), Infiltration Basins (I-2), Pocket Wetlands (W-4) and Surface Sand Filters (F-1). For nine of the proposed lots, Underground Infiltration practices (I-1) are proposed for the water quality volume. All proposed improvements at the Highgate-Woodlands project will receive treatment by at least one NYSDEC compliant practice as required. In those subcatchments where impervious surfaces are greater than 20 percent (i.e., portions of drainage areas F, G, H and K), either an infiltration practice or two practices in series are

provided as per DEP requirements. Calculations for the required WQv can be found in Appendix C. In many of the sub-basins, several practices are tied together in order to facilitate better phosphorus removal. It is noted that these practices are not technically required above and beyond the WQv, but are provided to maximize phosphorus removal within the watershed.

Impervious surfaces accumulate and concentrate pollutants associated with atmospheric fallout, motor vehicles, as well as applied pesticides and fertilizers. During storm events these pollutants are transported to down-gradient water resources such as wetlands, water courses and water bodies. Pollutants discharged untreated to water resources can have adverse effects on aquatic life, impair those resources for recreational use, and decline the ability for those waters to be sources for potable water.

Water quality volumes that meet the enhanced phosphorus removal standards are summarized in Table 1 for the amount required to be treated and the capacity as provided in each of the treatment facilities. Velocity dissipaters are specified at each pipe inlet and outlet as rip-rap aprons per "New York State Standards and Specifications for Erosion and Sediment Control", latest edition.

K6 (8.60 ac)	ED-K6	0.697	30361	37171	Micropool extended detention basin

1 Due to topographic constraints, shallow bedrock conditions and road geometry it is not possible to place a full size treatment practice in this location. However, it is expected that the use of a hydrodynamic separator discharging to a vegetated swale prior to discharge at the design point will accomplish the water quality goals. The flow capacity for the practice will be greater than or equal to the calculated peak runoff for the one-year storm, Therefore, providing this practice, although it is a deviation from the State standards, will treat the WQv.

2 There is no increase in impervious surface for this subcatchment. Therefore, in accordance with Chapter 9 "Redevelopment" of the Manual, a hydrodynamic separator will be installed and connected to any future drainage improvements on Sun Valley Drive. The proposed hydrodynamic separator has been sized to capture and treat the water quality volume peak flow as required.

3 Two NYSDEC compliant practices are provided to treat one subcatchment if the percent imperviousness exceeded 20% and the SMP provided is not infiltration. This was provided to address the additional requirements of the NYCDEP.

As noted in the table above, the site topography and shallow depth to bedrock within the lower reaches of sub-catchment B2 make it difficult to locate a practice that will physically capture the runoff quality volume. Much of the disturbed area is for grading purposes and will be restored and re-vegetated after construction. That portion of the basin that will be impervious, i.e., runoff from the initial section of the access road from Reed Road (approximately 6,500 sf) will be captured and treated within a hydrodynamic separator unit and discharged to a vegetated swale along Reed Road before it gets to the design point. While this is a deviation from the State standards, the local MS4 can determine that a flow-through practice of this type is acceptable if the deviation is justified, and the practice has the capacity to treat the peak rate of runoff at the WQv storm (in this case the one-year storm).

Channel protection Volume (Cpv) is designed to protect stream channels from erosive velocities. This goal is attained by providing a 24 hour extended detention for the one-year 24 hour storm event. The Cpv is calculated based on the rainfall depth for the one-year 24 hour storm event in combination with other parameters as shown in the calculations in Appendix C.

2. Green Infrastructure Practices/Runoff Reduction

The New York State Stormwater Management Design Manual now requires that consideration be given to applying practices that not only treat runoff for water quality but reduce or eliminate the increase in runoff from a site following changes to site perviousness. Overall runoff reduction can be achieved by infiltration, groundwater recharge, reuse, recycling, and other means to reduce the increase in runoff volume that occurs when the impervious cover of a site changes. The goal is to capture 100 percent of the post-development water quality volume increase to replicate pre-development hydrology by maintaining pre-construction infiltration, peak runoff flow, discharge volume, as well as minimizing concentrated flow by using runoff control techniques to provide treatment in a distributed manner before runoff reaches the collection system. This requirement can be accomplished by application of on-site green infrastructure techniques, standard stormwater management practices with runoff reduction capacity, and good operation and maintenance.

Projects that cannot meet 100% of runoff reduction requirement must provide a justification that evaluates each of the green infrastructure planning and reduction techniques, presented in chapter 5 of the Stormwater Design Manual, and identify the specific limitations of the site according to which application of this criterion is technically infeasible. Implementation of green infrastructure cannot not be considered infeasible unless physical constraints, hydraulic conditions, soil testing, existing and proposed slopes (detailed contour), or other existing technical limitations are objectively documented.

For the Highgate-Woodlands Project, a number of green infrastructure/runoff reducing practices have been identified as potential practices to be incorporated in the final project SWPPP (See Table 2). Specific runoff reduction volumes have not been calculated at this time, due to the on-going planning and testing before final design of the project. However, Table 2 lists those recommended practices that comply with the objectives of the Manual and identifies where such practices can be incorporated in the design.

For example, 12 of the 27 post-development sub-basins where perviousness has changed will use infiltration practices such as infiltration trenches or infiltration basins. During the planning process to date, the number of residential units has been reduced from 47 to 42, and the footprints of those remaining units reduced by approximately 30 percent. More than 70 acres of the 152 acre site will be undisturbed; approximately 15 acres will be set aside in dedicated open

Table 2:
Green Infrastructure Practices
 2/24/2012

Section	Green Infrastructure Practice	Can Green Infrastructure Practice be Used?	Location	Description
Planning Practices for Preservation of Natural Features and Conservation				
5.1.1	Preservation of Undisturbed Areas	Partially	Approximately 100 sf of proposed wetland disturbance to Wetland F. All remaining wetland areas will remain undisturbed.	Wetland area is proposed to be disturbed due to construction of Road C. The area will be restored upon completion of construction. There are 2 conservation areas proposed for the site as well. 70.42 acres of the 152.55 acre site will remain undisturbed.
5.1.2	Preservation of Buffers	Partially	Entire Site	Buffers are proposed to the maximum extent practicable for the development.
5.1.3	Reduction of Clearing & Grading	Yes	Entire Site	Disturbance is kept to a minimum and is limited to the amount needed for roads, driveways, dwellings, utilities and stormwater management facilities.
5.1.4	Locating Development in Less Sensitive Areas	No	-	No flood plains are disturbed. Disturbing steep slopes can not be avoided.
5.1.5	Open Space Design	Yes	Conservation Parcels	There are 2 conservation parcels proposed for the site.
5.1.6	Soil Restoration	Yes	All Disturbed Area	Perform de-ripping and de-compaction in all heavily trafficked areas and in areas of cut/fill where HSG C is present. Apply 6 inches of topsoil and seed over all disturbed areas.
Planning Practices for Reduction of Impervious Cover				
5.2.1	Roadway Reduction	Yes	All Private Roads on-site	The proposed roadway width for each private road throughout the site is 22 feet. This is 2 feet less in width than a typical 24 ft. wide roadway
5.2.2	Sidewalk Reduction	Yes	Sidewalks on all private roads	Sidewalks are proposed on one side of the street, rather than both sides, on all private roads throughout the site, reducing the total amount of impervious surface on the site.
5.2.3	Driveway Reduction	Yes	Common Driveway - Lots 2 & 3 Shared Driveways in Multi-Family Parcel	Due to the constraints of the site, common driveways can not be used along most roadways. The proposed emergency access driveway between Sun Valley Drive and Road A acts as a common driveway is for Lots 2 and 3. In the multi-family parcel, common driveways are proposed for all of the units. 60 of the 72 units utilize driveways that are shared by 4 units and the remaining 12 units utilize driveways that are shared by 2 units.
5.2.4	Cul-de-sac Reduction	Yes	Pervious Island Cul-de-sac (Town Road A, Private Roads B & C)	Pervious island cul-de-sacs are proposed at the bus turn-around at the end of Town Road A and a pervious island in the middle of the cul-de-sac at the end of Roads B & C.
5.2.5	Building Footprint Reduction	Yes	Single-Family Lots	During the planning process, the number of residential dwellings has been reduced from 47 to 42 and the overall size of the footprint has been reduced by approximately 30%.
5.2.6	Parking Reduction	Yes	Multi-family Units	Parking for Multi-family units is provided in each garage. On-street parking is provided along Road D and in the clubhouse lot for visitors. Parking stall dimensions will be kept to a minimum to reduce the total amount of impervious cover.

Table 2:
Green Infrastructure Practices

Section	Green Infrastructure Practice	Can Green Infrastructure Practice be Used?	Location	Description
Green Infrastructure Techniques for Runoff Reduction				
5.3.1	Conservation of Natural Areas	Yes	Conservation Parcels	There are 2 conservation areas proposed for the site. 70.42 acres of the 152.55 acre site will remain undisturbed.
5.3.2	Sheet flow to Riparian Buffers or Filter Strips	Yes	East Side of Road A	Filter strips will be provided along the rear of Lots 39-42 to treat the lawn area to the rear of the proposed dwellings. Refer to the diagram titled "Filter Strip Locations Lots 39-42"
5.3.3	Vegetated Swale	Yes	Single Family Lots 1, 4-12, 18-42	Swales are proposed along the driveways of the single family lots to convey the runoff to either the on-site stormwater practice or to the proposed road-side swale. The road-side swale directs the runoff to the closest stormwater practice
5.3.4	Tree Planting/Tree Pit	Yes	Entire Site	Trees are proposed along all roadways throughout the site.
5.3.5	Disconnection of Rooftop Runoff	Yes	SF Lots (without infiltration trenches) MF Buildings (along East side of Road D)	All roof leaders for the single family lots not being treated by underground stormwater infiltration trenches and discharged the swale along the driveway or roadway. The roof leaders for the multi-family buildings along the East side of Road D will discharge to a swale along the top of the retaining wall and convey the runoff to the nearest stormwater practice.
5.3.6	Stream Daylighting	No	N/A	Stream daylighting does not apply for the proposed project.
5.3.7	Rain Gardens	Yes	Single Family Lots	A rain garden will be proposed for each lot. Refer to the diagram titled "Typical Single Family Site Plan for Green Infrastructure"
5.3.8	Green Roofs	No	-	-
5.3.9	Stormwater Planters	No	-	Stormwater planters are typically used for re-development projects. Therefore, stormwater planters do not apply for this project.
5.3.10	Rain Barrels/Cisterns	No	-	-
5.3.11	Porous Pavement	Yes	Multi-family Units	Porous pavement will be considered for all multi-family driveways not within 100 feet of the water supply wells. Refer to the diagram titled "Potential Porous Pavement Locations - Multi-Family"

space parcels. By proposing private roads, roadway widths are 22 feet rather than a typical 24 foot width. Rain gardens are proposed for each individual lot that does not use infiltration trenches for stormwater quality (see Figure 4 for typical single family site plan).

An important feature of the plan regarding green infrastructure practices is the use of pervious pavement in the driveway/parking areas at the multi-family units. Figure 5 shows the locations within that development where pervious pavement could be used to reduce runoff volumes and treat stormwater flows. Due to restrictions within close proximity to well heads, the entire area can not be treated in this manner.

The site layout also provides an opportunity for the use of filter strips. Filter strips are shown on Figure 6 as undisturbed 100 foot buffers to the riparian corridor of Wetland F.

3. Stormwater Quantity and Peak Flow Rates

The Times of Concentration, surface cover types, and hydrograph / stormwater routing calculations for the existing and developed conditions are provided in the Appendix D. These site characteristics are fundamental elements of the pre- and post- development stormwater models.

Storm water quality and quantity computations are based upon the following publications:

- Soil Conservation Service (SCS) - TR-20
- Urban Hydrology for Small Watersheds - TR-55
- NYSDEC 'New York State Stormwater Management Design Manual', latest edition

For this Project, the computer software stormwater modeling package HydroCAD (version 9.10) was utilized for the stormwater analysis; this program is based on USDA Soil Conservation Service (SCS) Technical Release 55 (TR-55).

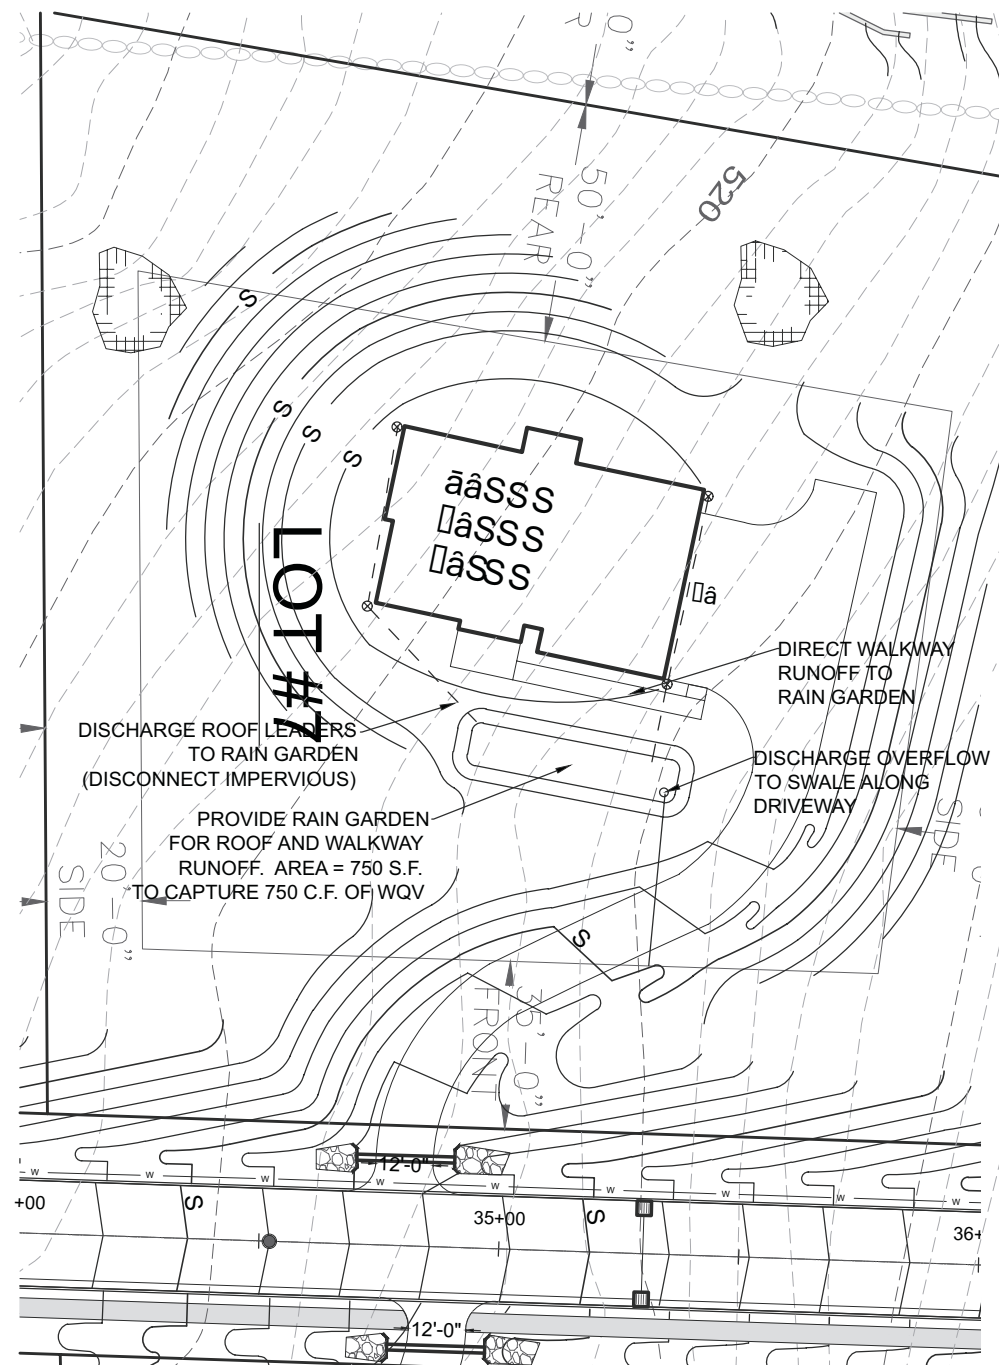

Post construction increases in peak flow rates from the site have been controlled to ensure that the post-development rate of runoff from the site would be “relatively equal” to, or less than, the existing discharge rates for 1, 2, 10, 25 and 100 year 24 hour storm events. Note that in cases where a post construction peak discharge rate is “relatively equal” to a pre-developed rate, the “relatively equal” rate represents no appreciable difference in flow.

4. Storm Frequencies

Storm frequencies are defined as the average frequency of occurrence of events having a given volume and duration. The storm frequencies used as a basis for computing peak rate of discharge were storms expected once every 1, 2, 10, 25, and 100 years with a duration of 24 hours as defined by the U.S. Department of Agriculture Soil Conservation Service.

5. Technical Approach

The method used for estimating peak discharge are included in the document released by the Engineering Division of the U.S. Department of Agriculture Soil Conservation Service titled "Urban Hydrology for Small Watersheds", Technical Release No. 55, dated June 1986, Type III

Water Quality Volume (cf)	750	
Drainage Layer and Soil Media Storage Volume		
A _{RG}	Proposed Rain Garden Surface Area (sf)	750
D _{SM}	Depth of Soil Media (ft)	1.5
D _{DL}	Depth of Drainage Layer (ft)	1

Storm Distribution. This criterion governs the data that is input into the software. The input and output data is provided in the Appendices D and E.

6. Detention Requirements

Detention facilities have been provided to capture and treat stormwater runoff from the impervious surfaces. Methodologies as set forth in Engineering Division of the U.S. Department of Agriculture Soil Conservation Service titled "Urban Hydrology for Small Watersheds", Technical Release No. 55, dated June 1986 were utilized.

7. Rainfall Intensity

Frequency and intensities, which have been used in this report in accordance with NYSDEC guidelines are outlined in Table 3, Rainfall Intensity by Storm Frequency. The Table identifies the rainfall intensity as a variable based on geographic location of the project, based on Northeast Regional Climate Center data.

Table 3 Rainfall Intensity by Storm Frequency	
Storm Frequency Year	Rainfall Intensity (24-Hour Period) (Inches)
1	3.1
2	3.7
10	5.5
25	7.0
100	9.0

8. Times of Concentration

The times of concentration (T_c) have been estimated to determine the time of the longest hydraulic route within each sub-watershed being analyzed. These routes include overland, shallow-concentrated and channel or pipe flows; refer to Appendices D and E for T_c values used.

9. Drainage Area Peak Discharge Rates

To mitigate the increase in peak rates of runoff as a result of developing the project site, stormwater detention facilities have been designed to reduce the post development rate of runoff to those relatively equal to or below existing. Refer to the tables below for peak discharge rates associated with this project. Refer to Appendices D and E for the pre- and post-developed stormwater models.

B. Stormwater Management

1. Approach and Concept

The stormwater collection and conveyance systems for the project will consist of drain inlets, catch basins, and HDPE pipe, open channel swales and a closed stormwater sewer conveyance system. The ponds have been designed to provide for water quality treatment and flood control, thereby mitigating the potential impacts associated with the post construction changes in stormwater quality and the developed condition rate of stormwater runoff relative to

the existing condition rate. Stormwater runoff rates for the storms ranging from the 1 year storm (NYSDEC Stream Channel Protection), to the 100-year storm (NYSDEC Extreme Flood) events have been analyzed and routed through existing and developed conditions utilizing computer software "HydroCAD". The basin design assumptions are provided in Appendices D and E of this SWPPP.

In order to take a most conservative approach when considering flooding potential, HydroCad also considers a "worst-case" scenario for safe conveyance of storm flows in unusual conditions. The calculations model a storm where stormwater basins outlets are compromised by being clogged or damaged. The HydroCad report eliminates the outlet structures from the modeling and utilizes only the emergency overflow weir as the outlet device. The 1-year, 2-year, 10-year, 25-year and 100-year storm events were modeled for each design point with at least one stormwater basin. As a result of modeling each stormwater basin with a clogged outlet structure, it was demonstrated that the emergency overflow weir has the capacity to safely pass each storm event without overtopping the berm of the stormwater basin.

As discussed below, the approach to stormwater quality treatment is generally to capture the WQv and release it over an extended period of time allowing the stormwater facility to perform its treatment function, mainly gravity settling of pollutants. The approach to runoff rate management for the proposed Project is to achieve a storm water management system design that would limit the developed peak rate of storm water runoff to levels relatively at or less than the existing peak rates. This shall be accomplished by providing stormwater detention facilities to reduce the peak rates of runoff for all storms.

C. Stormwater Quality Management Measures

The Stormwater Management Plan is based on the analysis of the changes in runoff characteristics between existing and developed stormwater conditions discussed in the previous section of this report, and the design criteria of the stormwater management practices described below. An outline of the varying stormwater quality management practices, both structural and non-structural to be implemented both during construction and/or after project completion is presented below.

1. Filter Strips (green infrastructure practice)

The purpose of a filter strip is to provide a buffer between impervious surfaces and water bodies. Permanent grasses and legumes filter runoff water by intercepting or trapping sediment, organics, nutrients, and other potential pollutants before they are able to reach a body of water. A few benefits of grass buffer strips include uptake and transformation of soluble contaminants by soil microbes and grass. The vegetation can also provide habitat for small birds and animals. The Design Manual provides criteria for the design of these practices, and site use will be in compliance with these criteria.

Grassy areas are proposed adjacent to the roadways and provide a disconnectedness between the buildings and the drainage system to further treat runoff. In addition portion of the property would be comprised of either lawn, meadow, or woodland. These areas would contribute to the overall treatment of stormwater from the development. These areas would capture and collect road deicing sand, sediment and debris prior to being discharged to the receiving streams and wetlands.

2. Swales (green infrastructure practice)

Swales are proposed to run adjacent to many of the interior roadways and driveways. These swales will be designed as vegetated swales in accordance with the Manual, and will contribute to the overall treatment of stormwater from the roadways as well as a portion of the rooftops. The swales would capture and collect road deicing sand, sediment and debris prior to it entering the stormwater conveyance system and being discharged to the river. The swales would be cleaned out periodically to remove the dirt and debris as part of routine maintenance.

3. Surface Sand Filters (F-1)

Stormwater filtering systems capture and temporarily store the WQv and pass it through a filter bed of sand, organic matter, or soil. Filtered runoff may be collected and returned to the conveyance system, or allowed to partially exfiltrate into the soil. The surface sand filter is a multi-chamber structure designed to treat stormwater runoff through filtration, using a sediment forebay, a primary filter media and, typically, an underdrain collection system. All surface sand filters have been designed as off-line practices.

The sand filters for this project are modeled in HydroCAD by using a “pond” node with the appropriate storage and outlet dimensions. Each sand filter is modeled with overflow weirs to pass any flow that exceeds the capacity of the practice. A detail of the proposed sand filter is provided on Sheet 31 of 39 of the subdivision plan set.

As per the recommendations set forth in HydroCAD, because the filter media restricts the flow of water from the ponding area, the filter becomes the effective outlet control. Therefore, the storage definition in HydroCAD only includes the open water volume above the bottom of the ponding area (area above the top of the sand filter). In addition, the under-drain pipe and perforations will be sized to handle the flow through the media, so the characteristics of the under-drain will not affect the HydroCAD routing.

As a result, the outlet device is modeled with exfiltration as the first outlet device. Exfiltration occurs from the top of the sand filter bed (above the top soil) to a distance 30 inches below the top of the sand filter bed (the invert of the under-drain pipe). The stormwater that flows through the filter media via exfiltration is then conveyed to the outlet box through the under-drain system. Any flow in excess of the water quality volume will flow through the weirs of the outlet box. All flow that enters the outlet box will be discharged through the outlet pipe. A detail of the proposed sand filter outlet structure is provided on Sheet 37 of 39 of the subdivision plan set.

4. Micro-pool Extended Detention Ponds (P-1)

Micropool extended detention ponds are proposed to treat the required water quality volumes. The treatment system includes a sediment forebay, rip-rap berm, micropool, outlet control structure, and emergency overflow weir. The micropool extended detention pond would treat the 90% rainfall event through pollutant fall-out and biological uptake.

5. Underground Infiltration Practice (I-1)

Underground Infiltration practices capture and treat the water quality volume within subsurface systems, where infiltration into the ground is the primary means of treatment. These practices utilize a pre-treatment vault for removal of suspended sediments prior to discharge into Cultec

units for dispersion and infiltration. Where underground infiltration practices are employed, both the WQv and RRv requirements for the tributary areas are met.

6. Infiltration Basins (I-2)

Stormwater infiltration basins capture and temporarily store the WQv before allowing it to infiltrate into the soil over a two-day period. The basin is used to capture and allow infiltration of stormwater runoff into the surrounding soils from the bottom of the basin. Pretreatment of runoff is required to reduce fines that may clog the soil over time, decreasing infiltration. Where infiltration basin practices are employed, both the WQv and RRv requirements for the tributary areas are met.

For both I-1 and I-2 practices, soil testing is required to ensure that there is adequate depth to bedrock and adequate separation from seasonal high ground water. Testing has occurred at numerous locations throughout the site as shown on plan set Sheet 16 of 39; results of that testing is provided on the data sheets included on Sheet 17 of 39.

7. Pocket Wetlands (W-4)

Stormwater wetlands (a.k.a. Constructed wetlands) are structural practices that incorporate wetland plants into the design to both store and treat runoff. As stormwater runoff flows through the wetland, pollutant removal is achieved through settling and biological uptake within the practice.

8. Stormwater Pollution Prevention Plan Implementation

In compliance with requirements established by the NYSDEC SPDES General Permit for Stormwater Discharges from Construction Activity (Permit No. GP-0-10-001), this SWPPP has been prepared and will be accordingly implemented with the approval of the Planning Board. A key component of the SWPPP is the included Erosion and Sediment Control Plan component (Sheets 19 to 22 of 39 in the plan set and Appendix E), which sets forth the measures to be implemented before the start of construction, and throughout the entire construction phase. The implementation of these measures will be monitored and maintained during construction in accordance with the SPDES regulations. Stabilization of the site shall also comply with the conditions and requirements set forth therein and further established by the local municipality, if any. Refer to Appendix F for a copy of SPDES Permit No. GP-0-10-001.

Several temporary structural practices to be utilized to mitigate any potential impacts include, but are not be limited to the following:

1. Surrounding material stockpiles with silt fencing and hay bale dams,
2. Grading and stabilization of excavated and embankment areas in a timely fashion,
3. Interception of the site runoff from disturbed soils in ditches with check dams and conveyance to sediment basins to permit settling, and
4. Stabilized construction entrances which would be constructed and maintained during construction to minimize the off-site migration of sediment from vehicular traffic.

The following is a summary of each of the post-development sub-basins and the treatment practices that are proposed to mitigate potential impacts to water quality.

Sub-basin A1a. Post development drainage area A1a will require some minor grading but not have a change in cover or increase in impervious surface. A vegetated swale along Reed Road will treat runoff from the 1.56 acre drainage area and convey this flow to Design Point 1A.

Sub-basin A1b. Post development drainage area A1b will not have a change in cover or increase in impervious surface. A vegetated swale along Reed Road will treat runoff from the 1.03 acre drainage area and convey this flow to Design Point 1B.

Sub-basin A2. Post development drainage area A2 (3.28 acres) includes surface runoff from the graded slope north of Road A and a small portion of Road A. Future expansion area for the subsurface sewage disposal area is also included in this sub-basin. Runoff from Road A will be collected via the catch basin/pipe network, conveyed to a hydrodynamic separator for treatment of runoff quality, flow under Road A through a culvert and enter the vegetated swale along Reed Road to Design Point 1A. Much of the disturbed area is for grading purposes and will be restored and re-vegetated after construction.

Sub-basin A3a. Post development drainage area A3a (0.70 acres) includes runoff from the graded slope to the north of Road A and a section of Road A. Flows will be conveyed to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter system including a treatment forebay and separate sand filter basin. Higher intensity storms are bypassed to the design point via a rip rap swale to Design Point 1A.

Sub-basin A3b. Post development drainage area A3b (2.10 acres) includes runoff from the graded slope to the north of Road A and a section of Road A (including half the proposed turnaround). Future expansion area for the subsurface sewage disposal area is also included in this sub-basin. Flows will be conveyed to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter system including a treatment forebay and separate sand filter basin. Higher intensity storms are bypassed to the design point via a rip rap swale to Design Point 1A.

Sub-basin A4. Post development drainage area A4 (6.93 acres) includes runoff from the subsurface sewage disposal area, the graded slope north of Road A, and a section Road A. Flows are conveyed as sheet flow for the vegetated areas and piped from the Road to a micropool extended detention basin (ED-A4). Since the contributing area to ED-A4 is less than the 10 acre minimum required by the New York State Stormwater Management Design Manual, adequate water balance will be achieved through the installation of an impervious clay liner, and anti-clogging devices will be installed on the outlet structure to prevent debris from obstructing the discharge flow. The outlet pipe discharge is conveyed via a rip rap swale to Design Point 1A.

Sub-basin B1. Post development drainage area B1 (3.91 acres) includes runoff from undeveloped areas with the exception of some grading on the slope to the south and west of Road A. This slope will be stabilized following grading. This drainage will flow to Design Point 2. No impervious surfaces are proposed in this drainage area.

Sub-basin B2. Post development drainage area B2 (4.52 acres) includes runoff from the subsurface sewage disposal area, the house and driveway on Lot 1, undisturbed areas and the private portion of Road A. This runoff is conveyed to a flow-splitter manhole that diverts the one-year storm (WQV) to the to a surface sand filter system, which then overflows to dry basin B3 for attenuation of the higher intensity storms.

Sub-basin B3. Post development drainage area B3 (0.62 acres) does not include any impervious surface, and is made up of the graded areas for the basin itself. Some surface runoff is included in this basin, but the majority is the overflow volumes from Sub-basin B-2, which is conveyed through B-3 for final polishing and peak flow attenuation before discharge under Road A to Design Point 2.

Sub-basin C1. Post development drainage area C1 (2.63 acres) includes runoff from undisturbed areas and the lower portion of the emergency access road from Sun Valley Drive. While there is not an increase in impervious surfaces proposed in this sub-catchment, the disturbed impervious surfaces will be conveyed via sheet flow over undisturbed areas and shallow concentrated flow (via vegetated swale) to a hydrodynamic separator at Sun Valley Drive in accordance with Chapter 9 of the Manual, 'Redevelopment'. This structure will then be connected to any future drainage improvements in Sun Valley Drive.

Sub-basin C2. Post development drainage area C2 (4.03 acres) includes runoff from the proposed emergency access road, undisturbed areas, the proposed residence and driveway on Lot 2 and the driveway for the proposed residence on Lot #3. This runoff is conveyed by sheet flow over undisturbed areas, shallow concentrated flow (via vegetated swale) and piping (from Lot 2) to Pocket Wetland PW-C2, then discharged to a vegetated swale to Design Point 3.

Sub-basin D1. Post development drainage area D1 (5.75 acres) includes runoff from undisturbed areas (the proposed conservation parcel) and some grading for the outfall channel for Basin PW-C2. Runoff flows to Design Point 4. No impervious surfaces are proposed in this drainage area.

Sub-basin E1. Post development drainage area E1 (1.06 acres) includes runoff from undisturbed areas and the grading at the rear of the proposed residence on Lot #12. This runoff is conveyed by sheet flow to Design Point 5. No impervious surfaces are proposed in this drainage area.

Sub-basin F1. Post development drainage area F1 (5.37 acres) includes runoff from undisturbed areas along the western property line. This area will remain undisturbed with the exception of installation of infiltration practices for proposed residences along Road B. This runoff is conveyed by sheet flow Design Point 6. No impervious surfaces are proposed in this drainage area.

Sub-basin F2. Post development drainage area F2 (0.56 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #16. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin F3. Post development drainage area F3 (0.49 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #15. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin F4. Post development drainage area F4 (0.76 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #14. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin F5. Post development drainage area F5 (0.32 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #13. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basins G1 - G7: It is noted that a study of the stormwater collection system downstream of Design Point 7 has been requested by the Town of North Salem prior to final design of the stormwater plan, and will be provided. The applicant is providing the available information to date and concludes that there will be significant decreases to peak stormwater rates following construction of this project to this design point.

Sub-basin G1. Post development drainage area G1 (2.36 acres) includes runoff from two proposed residences on Lots 3 and 4. This runoff is conveyed to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter system, with overflow going to Basin B-G1 for peak rate attenuation of the higher intensity storms. Treated runoff is then discharged under Road A to Wetland F for final polishing and conveyance to Design Point 7.

Sub-basin G2. Post development drainage area G2 (6.67 acres) includes runoff from eight proposed residences on either side of Road A (Lots 5 to 8, Lots 39 to 42). This runoff is conveyed by vegetated swales and/or a pipe network along driveways and either side of Road A to an infiltration basin I-G2 with forebay. Treated runoff is then discharged to Wetland F for final polishing.

Sub-basin G3a. Post development drainage area G3a (3.34 acres) includes runoff from Road B and a portion of Road A. It also includes a proposed residence on Lot 9 and the recreation center. This runoff is conveyed by pipe network to the infiltration basin I-G3a with forebay. Treated runoff is then discharged over undisturbed land to Design Point 7.

Sub-basin G3b. Post development drainage area G3b (3.72 acres) includes runoff from three proposed residences on Lots 10, 11 and 12. This runoff is conveyed by vegetated swale to infiltration basin I-G3b with forebay. Treated runoff is then discharged under Road B over undisturbed land to Design Point 7.

Sub-basin G4a. Post development drainage area G4a (1.99 acres) includes runoff from undisturbed land to a vegetated swale behind the recreation center. This flow is conveyed to the dry basin (B-G4a) north of the recreation center, under Road B over undisturbed land to Design Point 7.

Sub-basin G4b. Post development drainage area G4b (12.97 acres) includes runoff from undisturbed land associated with the stream corridor of Wetland F. Flows are conveyed under Road B via a new arched culvert and continue in the existing flow path.

Sub-basin G5a. Post development drainage area G5a (2.15 acres) includes runoff from Road C and the adjacent embankment. This flow is conveyed via a vegetated swale and a pipe network to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter system SF-G5a, then discharged through Basin B-G5 to Wetland F for peak rate attenuation of the higher intensity storms and final polishing.

Sub-basin G5b. Post development drainage area G5b (0.16 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #17. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin G-5c. Post development drainage area G5c (0.14 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #21. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin G6. Post development drainage area G6 (3.52 acres) includes runoff from the northernmost multi-family unit east of Wetland F. Runoff from impervious rooftops and driveways will be captured first in dry wells located between each building. Overflow is conveyed to a flow-splitter manhole that diverts the one-year storm (WQV) via a pipe network to a surface sand filter system SF-G6. Overflow is then conveyed to Basin B-G6 for peak rate attenuation of the higher intensity storms. Treated runoff is then discharged to Wetland F for final polishing.

Sub-basin G7. Post development drainage area G7 (1.54 acres) includes runoff from the proposed residence on Lot 38, and some grading from Lot 37. Runoff is conveyed via a swale and pipe network to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter SF-G7, with overflow going to B-G7 for peak rate reduction of the higher intensity storms. Treated runoff is then discharged to Wetland F for final polishing.

Sub-basin H1. Post development drainage area H1 (8.06 acres) includes runoff from undisturbed areas along the northern property line. This area will remain undisturbed with the exception of installation of infiltration practices for proposed residences on Lots 18, 19 and 20. This runoff is conveyed by sheet flow to Design Point 8.

Sub-basin H2. Post development drainage area H2 (0.35 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #18. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin H3. Post development drainage area H3 (0.29 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #19. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin H4. Post development drainage area H4 (0.41 acres) includes runoff from grading and impervious surfaces associated with the proposed residence on Lot #20. This runoff will be conveyed to a Cultec infiltration system and discharged in to the ground.

Sub-basin I1. Post development drainage area I1 (2.28 acres) includes runoff from undisturbed land along the northern property line. This runoff flows as sheet flow untreated to Design Point 9.

Sub-basin J1. Post development drainage area J1 (2.90 acres) includes runoff from undisturbed land in the southeast corner of the property. This runoff flows as sheet flow untreated to Design Point 10.

Sub-basin K1. Post development drainage area K1 (36.59 acres) includes runoff from undisturbed land in the central and eastern parts of the property. This open space area includes Wetlands A, B, C, D and E, as well as the watercourse corridor that connects them. No development or other creation of impervious surface is proposed for this sub-basin. This runoff flows as sheet flow untreated to Design Point 11.

Sub-basin K2. Post development drainage area K2 (2.05 acres) includes runoff from undisturbed land, the proposed asphalt access road and the proposed sewage treatment plant. This runoff is conveyed in a vegetated swale to a proposed surface sand filter (SF-K2). This basin overflows across undisturbed land to Wetland B for final polishing.

Sub-basins K3 and K4. Post development drainage area K3 (11.03 acres) includes runoff from the multi-family units east and southeast of Wetland F. Runoff from impervious rooftops and driveways will be captured first in dry wells located between each building. Overflow is conveyed by vegetated swales and a pipe network to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter SF-K3. Treated runoff (and runoff from the higher intensity storms) is then discharged to micropool extended detention basin ED-K3 (which makes up Sub-basin K4, 1.09 acres) for additional treatment and peak rate attenuation. Note that two practices are provided for water quality due to impervious surfaces exceeding 20 percent of the sub-catchment, as required by the NYCDEP regulations.

Sub-basin K5. Post development drainage area K5 (8.37 acres) includes runoff from Road C and the Road C cul de sac, three proposed residences at the end of Road C (Lots 30, 31 and 32), two proposed residences south of Road C (Lots 36 and 37), six residences north of Road C (Lots 22 through 27) and a portion of the asphalt access road to the water treatment plant. This runoff is conveyed by vegetated swales and a pipe network to a flow-splitter manhole that diverts the one-year storm (WQV) to the surface sand filter system with forebay (SF-K5), which then overflows to micropool extended detention basin ED-K5 for additional treatment and peak rate attenuation of the higher intensity storms. Since the contributing area to ED-K5 is less than the 10 acre minimum required by the New York State Stormwater Management Design Manual, adequate water balance will be achieved through the installation of an impervious clay liner, and anti-clogging devices will be installed on the outlet structure to prevent debris from obstructing the discharge flow. Treated runoff is then discharged over undisturbed land to Wetland A for final polishing. Note that two practices are provided for water quality due to impervious surfaces exceeding 20 percent of the sub-catchment, as required by the NYCDEP regulations.

Sub-basin K6. Post development drainage area K6 (8.60 acres) includes runoff from five proposed residences (Lots 28, 29, 33, 34 and 35). This runoff is conveyed by a vegetated swale from the northeast corner of the property, under Road C via culvert and ultimately to micropool extended detention basin ED-K6. Since the contributing area to ED-K6 is less than the 10 acre minimum required by the New York State Stormwater Management Design Manual, adequate water balance will be achieved through the installation of an impervious clay liner, and anti-clogging devices will be installed on the outlet structure to prevent debris from obstructing the discharge flow. Treated runoff is then discharged to Wetland A for final polishing.

IV. CONSTRUCTION AND MAINTENANCE OPERATIONS

A. Erosion and Sediment Control Plan

The purpose of the Erosion and Sediment Control Plan is to minimize the erosion of disturbed soil and to prevent the migration of sediment into surface waters and off-site properties during construction and until the site has received final stabilization. The Erosion and Sediment Control Plan included with this SWPPP (Sheets 19 to 22 of 39 in the plan set and Appendix E) and the construction drawings accomplishes that purpose through reducing runoff velocities, limiting the area of disturbed soils at any one time, and rapidly stabilizing disturbed soils. The erosion and

sediment control plan contains specifications for erosion controls and associated construction details designed to mitigate potential impacts associated with erosion and sedimentation.

Erosion and sediment control should be accomplished by four basic principles: diversion of clean water, containment of sediment, treatment of dirty water, and stabilization of disturbed areas. Diversion of clean water should be accomplished with swales. This diverted water should be safely conveyed around the construction area as necessary and discharged downstream of the disturbed areas. Sediment should be contained with the use of silt fence at the toe of disturbed slopes and excavation of the temporary sediment basins. Disturbed areas should be permanently stabilized within 14 days of final grading to limit the required length of time that the temporary facilities must be utilized. The owner will be responsible for the maintenance of the temporary erosion control facilities.

Soil erosion and sedimentation measures, such as silt fencing, would be installed following a pre-construction conference with appropriate agency staff, and prior to any construction activities. In addition, the Applicant would engage a Certified Professional in Stormwater Quality/Erosion and Sediment Control, or equally qualified professional, to oversee implementation of this SWPPP, including the site specific Erosion and Sediment Control Plan component.

Implemented, monitored, and enforceable erosion and sediment controls would be utilized during the construction phase as the primary means of controlling erosion and sedimentation. The goal of the Erosion and Sediment Control Plan is to minimize the potential for soil erosion from areas exposed during construction and prevent sediment from reaching the downgradient receiving waters, including the Croton River.

During construction, areas of active disturbance would generally be limited to five acres, unless special permission is sought and received from the local MS4 to exceed this limit. Runoff from areas outside of disturbances would be diverted away from erodable soils.

Both temporary and permanent erosion control facilities and activities would be applied over the duration of project related activities on the site. Implementation of the soil erosion control plan would be based on the latest New York State Standards and Specifications for Erosion and Sediment Control, latest edition.

The temporary soil erosion and sediment control measures include protective earth moving procedures and grading practices, vegetated cover, hay bales, silt fencing, stabilized construction entrance, temporary stormwater diversions, construction road stabilization, silt traps, inlet protections and sediment basins. The methodology of the plan is to control erosion and sedimentation, and to re-establish vegetation as soon as practicable. All proposed erosion and sediment controls and details as well as the stormwater management facilities are shown on the Erosion and Sediment Control Plan as prepared by the Applicant's Engineer. All proposed soil erosion and sediment control practices are designed in accordance with the following publications: New York State Standards and Specifications for Erosion and Sediment Control, latest edition and the New York State General Permit for Stormwater Discharges, GP-0-10-001 (General Permit).

Temporary sediment basins would be converted to permanent stormwater detention basins once the tributary drainage area has received final stabilization and established vigorous vegetative growth. In addition, rock outlet protections would be installed at the inflow of the

stormwater detention facilities. All other temporary devices such as silt fencing, hay bales and diversions would be removed once final stabilization of the site has been attained.

The construction materials and vehicles expected to be present during construction include but are not limited to drainage pipe, pre-cast concrete drainage structures, earth moving equipment, concrete trucks, asphalt trucks, and worker vehicles. All construction related debris would be collected and removed from the area on a regular basis. Concrete wash out areas would be provided where necessary. Sediment spoils would be disposed of at an approved location utilizing temporary erosion control devices for that site operation.

B. Winter Site Stabilization / Site Inspections

The guidance below has been incorporated into the SWPPP to address the requirements for winter site stabilization on construction sites where the owner/operator wishes to reduce weekly site inspections that are required pursuant to the State Pollutant Discharge Elimination System General Permit GP-0-10-001.

At the end of the construction season when soil disturbance activities will be finalized or suspended until the following spring, it may be desirable to reduce the frequency of the required inspections. If the soil disturbance is completely suspended and the site is properly stabilized an owner/operator may reduce the self-inspection frequency, but shall maintain a minimum of monthly inspections in all situations (even when there is total winter shutdown).

To be allowed to reduce inspection frequencies, the operator must complete stabilization activities (including perimeter controls, traps, and barriers etc) before proper installation is precluded by snow cover or frozen ground. If vegetation is desired, seeding, planting, and/or sodding must be scheduled to avoid die-off from fall frosts and allow for proper germination/establishment.

All erosion and sediment controls must be installed and maintained according to the NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book). The main items to consider are:

1. Site Stabilization - All bare/exposed soils must be stabilized by an established vegetation, straw or mulch, matting, rock or other approved product such as rolled erosion control product. Seeding of areas along with mulching is encouraged, however seeding alone is not considered acceptable for proper stabilization.
2. Sediment Barriers - Barriers must be properly installed at all necessary perimeter and sensitive locations.
3. Slopes - All slopes and grades must be properly stabilized with approved methods. Rolled erosion control products must be used on all slopes greater than 3/1, or where conditions for erosion dictate such measures.
4. Soil Stockpiles - Stockpiled soils must be protected by the use of established vegetation, an anchored-down straw or mulch, rolled erosion control product or other durable covering. A barrier must be installed around the pile to prevent erosion away from that location.

5. Construction Entrance - All entrance/exit locations to the site must be properly stabilized and must be maintained to accommodate snow management as set forth in the NYS Standards and Specifications for Erosion and Sediment Control.

6. Snow Management - Snow management must not destroy or degrade erosion and sediment control practices.

Frozen ground, winter conditions and equipment can affect erosion and sediment control practices. Check for damage during monthly inspections and repair as necessary. This is especially important during thaws and prior to spring rain events. Weekly inspections must resume no later than March 15 or as directed by the Department.”¹

C. Sequence of Construction

It is expected that the project would take approximately five to seven years to construct from the time of ground breaking to final completion, with work commencing shortly after the receipt of all necessary approvals. Throughout the construction process strict adherence to the Erosion Control Plan and Specifications would be maintained to ensure that sediment is contained within the improvement areas. Storm water management is also provided for water quality treatment such that the project areas would not represent a negative impact or degradation in water quality to any reservoir, stream, wetland or watercourse. The primary goal of the soil erosion and sediment control measures is to reduce soil erosion from areas stripped of vegetation during and after construction, and to prevent discharge of sediment off-site. Erosion control barriers shall be placed around exposed areas during construction. The barriers shall consist of staked haybales and or silt fence. Temporary diversions would be constructed to reduce runoff velocities to non-erosive levels. Runoff from undisturbed areas would be directed off-site and runoff from exposed soils and disturbed areas would be directed to sediment basins. The sediment basins or traps would be used at stormwater collection points to allow sediment to settle prior to stormwater discharging off-site.

Any areas stripped of vegetation during construction would be left exposed for the shortest time possible with a maximum inactive exposure of 14 days. Topsoil removed during construction would be stockpiled for future use in final grading and landscaping. A stockpile location has been provided on the Erosion Control Plan and shall be contained within a silt fence barrier.

Temporary vegetation would be established to protect disturbed soil areas during construction. Should growing conditions be unsuitable for the temporary vegetation, mulch would be used and applied in accordance with the Erosion and Sediment Control Plans and the NYS Standards and Specifications for Erosion and Sediment Controls. Materials that may be used for mulching include; straw, hay, wood fiber, synthetic soil stabilizers, mulch netting, and sod. A permanent vegetative cover would be established upon completion of construction of those areas that have been brought to finish grade and to remain undisturbed.

A temporary stabilized construction entrance would be constructed at the entrances to the site. The purpose of a stabilized entrance is to remove soil from the construction vehicle tires prior to exiting the site and traveling on the public roadways.

The following is an overall Construction Sequence followed by a site specific phasing plan; (See construction documents for detailed operations)

¹ NYSDEC: <http://www.dec.ny.gov/chemical/29074.html>

1. Obtain proper plan approvals;
2. Submit Notice of Intent;
3. Hold Pre-construction meeting on-site and have Contractor Certifications signed;
4. Install on-site mailbox to hold NOI, NOI/Permit Approval Letter, SWPPP, Erosion and Sediment Control Plans, and Stormwater Construction Log Book. Install rain gauge (rainfall to be recorded daily by site personnel);
5. Install stabilized construction entrance at the site access point;
6. Install silt fence, construction limit fence, and tree protection barriers;
7. Excavate temporary sediment basins and sediment traps;
8. Minimize clearing within the limits of disturbance as required for construction;
9. Create soil stockpiles and install soil stockpiling protection;
10. Install temporary stormwater diversions, and sediment basins at the locations of the water quality ponds to intercept and detain any sediment during construction. At the end of construction, and upon final stabilization of the site, convert ponds into permanent stormwater quality detention ponds;
11. Excavate for buildings, roads and utilities and stockpile topsoil;
12. Perform temporary stabilization over all disturbed soil areas;
13. Upon final stabilization² of the site, remove temporary soil erosion and sediment control measures;
14. Final inspection and filing of the Notice of Termination.

Phasing/Sequencing Plan

Proposed Phasing General Guidelines

1. Utility Markouts Shall Be provided prior to Construction.
2. All Construction Limit Fencing to Be Installed Prior to Construction.
3. All Erosion Control Devices to Be Installed Prior to Construction and Constructed in accordance with the "NYS Standards and Specifications for Erosion and Sediment Control, Latest Edition."
4. Survey Stakeout Prior to Construction.
5. Although phases are larger than 5 acres, disturbed areas are to be limited to as small an area as possible; areas of active disturbance would generally be limited to five acres, unless special permission is sought and received from the local MS4 to exceed this limit.
6. Site shall be stabilized on a regular basis.
7. All Erosion Control Devices shall be monitored as stated in the "New York State Standards and Specifications for Erosion and Sediment Control, Latest Edition."

² Final stabilization means that all soil disturbing activities have been completed and that a uniform perennial vegetative cover with a density of 80% has been established or equivalent stabilization measures have been adequately employed.

Proposed Phasing/Sequencing

Phase 1

- Construct Road "A" from Reed Road to Station 31+00 including Retaining Walls and associated Drainage Basins including Catch Basins, Drain Manholes, and Pipes.
- Rock Processing Equipment in area of proposed turn around.
- Construct Water Treatment Plant, access road, install well feed lines from wells to water treatment plant and install Water Mains.
- Construct Wastewater Treatment Plant and access road.
- Install Sewage Collection system from SMH A1 to A3, SMH D1 - D10, through Septic Tanks, Pump and Fields.
- Construct Single Family Houses on Lots 1, 2, 3 & 4.
- Rough Grade Road "D" From Road "A" to cul-de-sac.
- Rough Grade Road "E".
- Multi-family Buildings 1, 2, 3, 4, 5, & 6 including associated Retaining Walls.
- Multi-family Clubhouse and Recreation.
- Install Landscaping Requirements for the finished areas of Construction Construct Emergency Access Road from Sun Valley Drive.

Phase 2

- Precast Concrete Box Culvert and Precast Concrete Bridge.
- Move Rock Processing Equipment to area of Multi-Family Unit 18.
- Rough Grade Road A from Station 31+00 through Intersection to Station 2+50 on Road B and associated Drainage.
- Install Water Main Road from Station 31+00 through Intersection of Road A, B & C.
- Install Sewage Collection from SMH A4 through Intersection of Roads A, B, & C. Install Lift Station and Force Mains to Plant.
- Construct Houses on Lots 5 - 9, 39 - 42.
- Construct Single Family Recreation Center.
- Construct Multi-family Buildings 7 - 19 including associated Retaining Walls.
- Finish construction of Road D, including association drainage, sewer and water services.
- Finish construction of Road D, including association drainage, sewer and water services.
- Install Landscaping Requirements for the finished areas of Construction.

Phase 3

- Rough Grade Road B from Station 2+50 to cul-de-sac and install associated Drainage.
- Move Rock Processing Equipment to area of Cul-De-Sac.
- Install Water Main Road B from Station 2+50 to cul-de-sac.
- Install Sewage Collection from SMH B-1 to End.
- Construct Houses on Lots 10 - 16.
- Finish construction of Road B, including drainage, sewer, and water services.
- Install Landscaping Requirements for the finished areas of Construction.

Phase 4

- Rough Grade Road C from Intersection to cul-de-sac and install associated Drainage.
- Move Rock Processing Equipment to area of Cul-De-Sac on Road C.

- Install Water Mains Road C from Intersection to Cul-De-Sac.
- Install Sewage Collection from SMH C-1 to End, Install Lift Station and Force Mains.
- Construct Emergency Access Road from Road D to Road C.
- Construct Houses on Lots 17 - 38.
- Finish construction of Road C, including drainage, sewer, and water services.
- Construct Reed Road Improvements.
- Construct Walking Path.
- Install Landscaping Requirements for the finished areas of Construction.

D. Hazardous Spills, Litter, Construction Debris Control

Federal and New York State laws require notification of government agencies when certain releases of pollutants, petroleum and other hazardous materials occur. DEC's Spill Response Program operates the New York State Spill Hotline - 800-457-7362 - to receive reports and notify DEC's trained technical responders and shall be contacted within 2 hours of discovery, except spills which meet all of the following criteria:

- The quantity is known to be less than 5 gallons; and
- The spill is contained and under the control of the spiller; and
- The spill has not and will not reach the State's water or any land; and
- The spill is cleaned up within 2 hours of discovery.

A spill is considered to have not impacted land if it occurs on a paved surface such as asphalt or concrete. A spill in a dirt or gravel parking lot is considered to have impacted land and is reportable.

Chapter 616 of the laws of 2006, amended Environmental Conservation Law to require DEC to notify the public and the chief executive officer of the village, town, or city in which the spill has occurred within 48 hours of receiving a spill report, when the spill meets the following criteria:

- the material spilled is a hazardous substance listed in 6NYCRR Part 597 (which does not include petroleum);
- the spiller is in actual or constructive possession or control of more than 1,100 gallons of the substance, and
- the spill could reach the lands or waters of the state, including groundwater.

The owner / operator of the construction site shall implement a litter and construction debris program to prevent items from causing degradation to water resources that includes the following:

All erodeable construction materials or materials that may leach pollutants and other miscellaneous materials stored on site will be covered by water resistant coverings to prevent contact with rainwater and they shall be protected from stormwater runoff via diversions, skirting or stored off the ground, to prevent contact with stormwater runoff. Soil stockpiles shall be skirted with silt fence as per the erosion and sediment control plans.

Construction debris and miscellaneous solid waste shall be stored and in waste containers such as dumpsters to be periodically emptied by contracted waste haulers or taken to an approved landfill or disposal site.

E. Stormwater Management Facilities Maintenance Program

The permanent Stormwater Management Facilities would be operated and maintained by:

Name: Highgate-Woodlands Homeowners Association

Address: _____

Phone Number: _____

The Owner shall inspect the facilities once a month, and once a year by a Certified Professional in Stormwater Quality (CPSWQ). A report by the certified professional shall be submitted to the Owner and the Town of North Salem Building Department in the event deficiencies are found. In addition, the Owner shall inspect the system after each major storm event to ensure the small orifices and inlets remain open. Specific attention should be paid to the following:

- Evidence of clogging of outlet control device;
- Erosion of the flow path through the detention facility;
- Subsidence, erosion, cracking or tree growth on the embankments;
- Accumulation of sediment.

The following maintenance program is proposed in order to maintain the proper function of all stormwater management facilities: The owners shall mow the side slopes and bottom of the basin as necessary to maintain their appearance but not less than twice a year and shall inspect the basin, and if necessary, remove invasive woody vegetation to prevent it from becoming established within the basin.

During mowing operations, litter and debris would be removed from swales, stormwater management basins and the outlet control structures.

Clean driveway culverts and other drainage structures from silt regularly, but not less than once a year.

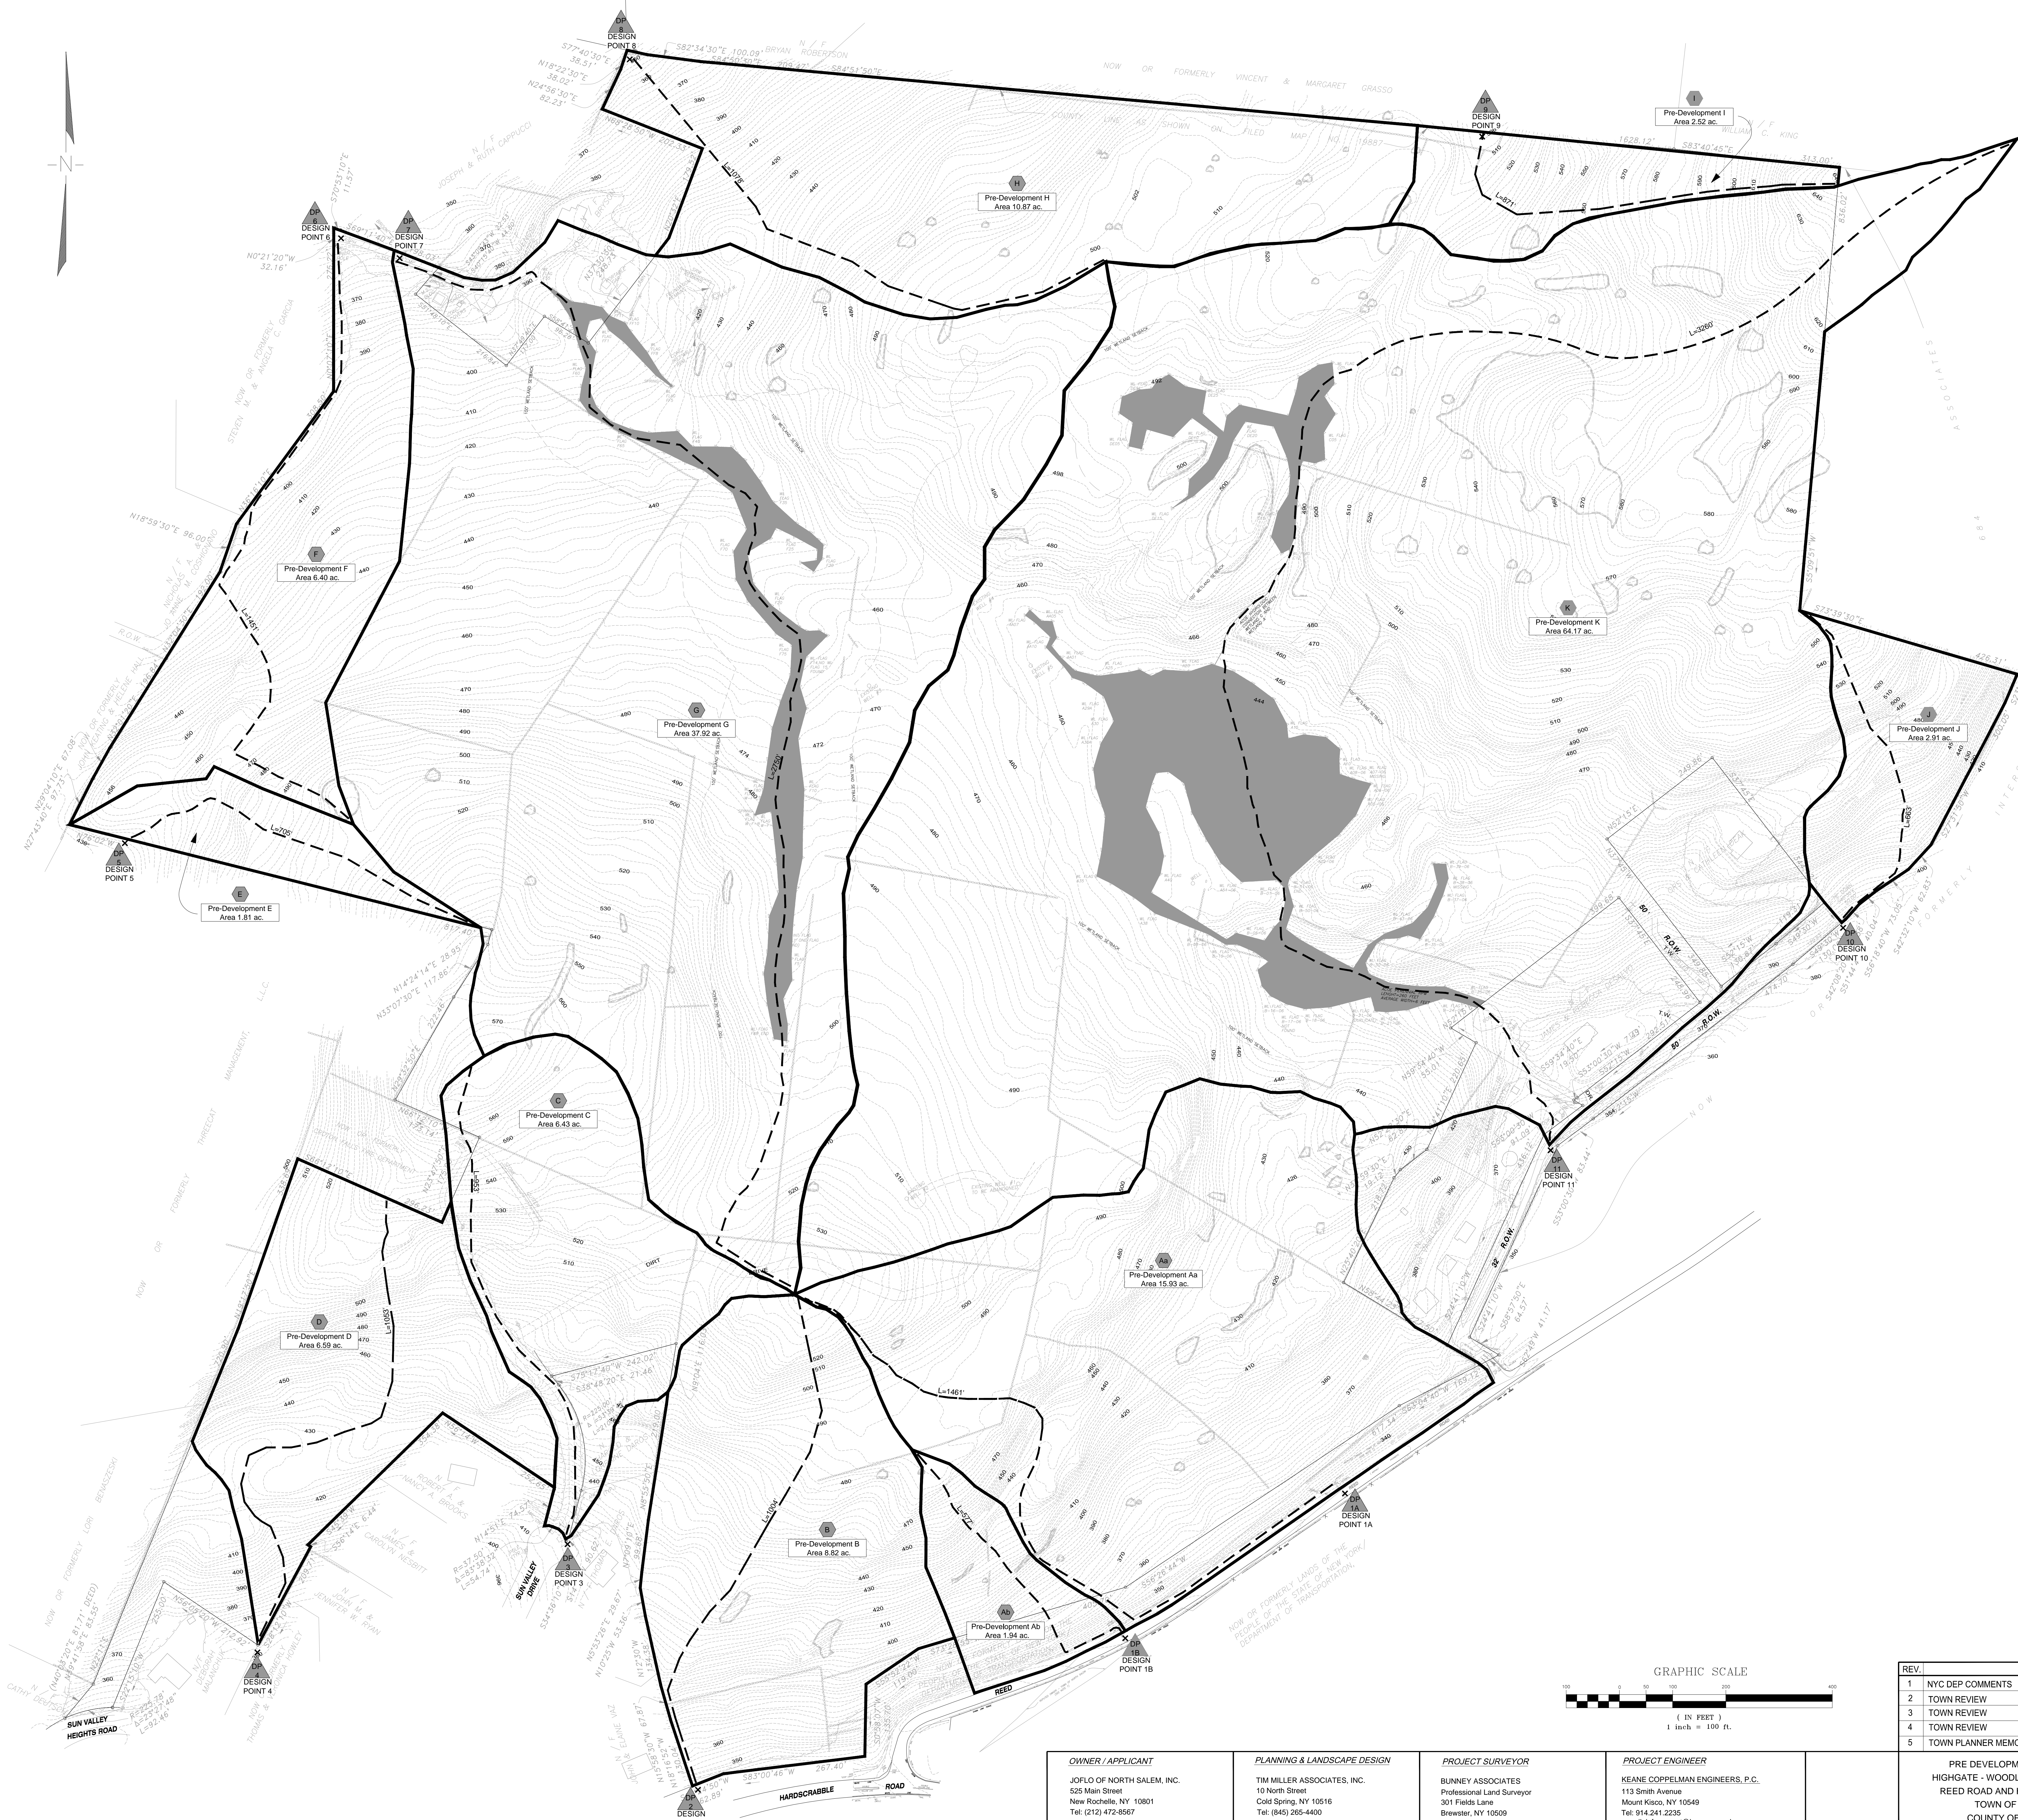

Remove sediment build up in the basin as required, but a minimum of every five years. A back-hoe with a minimum reach of 25' could be used to remove silt accumulation. Laborers with shovel and wheelbarrows would be used to maintain the embankment slopes, to repair minor erosion problems and remove minor accumulation of silt. The use of hand labor would also minimize the disturbance of stabilized areas and the established vegetation. A rubber-tired back-hoe has the reach and maneuverability to maintain these basins from the adjacent areas.

Tree growth on the downstream face of the detention ponds shall also be monitored regularly. Trees that develop shall be removed during routine maintenance of the basin.

The owner shall take all necessary measures to have seeps, leaks, and/or settlements on the embankment of the water quality ponds repaired. If seeps, leaks, and/or settlement are discovered the owner shall be obligated to contract a certified professional: CPSWQ or licensed civil engineer to assess the problem and offer solutions to repair.

Information contained in Appendix G (Construction Log Book) is provided to ensure compliance with the SPDES GP-0-10-001. Appendix G should be copied in its entirety, completed by the applicable parties and inserted into the front of the Construction Site Erosion and Sediment Control Log Book once construction commences.

¹ SMP = Stormwater Management Practice

² Imp = Impervious

³ WQv = Water Quality Volume

⁴ Two NYSDEC compliant practices are provided to treat one subcatchment if the percent imperviousness exceeded 20% and the SMP provided is not infiltration. This was provided to address the additional requirements of the NYCDEP.

⁵ The proposed hydrodynamic separator has been sized to capture and treat the water quality volume peak flow as required.

⁶ There is no increase in impervious surface for this subcatchment, therefore a hydrodynamic separator will be installed and connected to any future drainage improvements along Sun Valley Drive

358.24	0

Summary for Pond FS A3b: Flow Splitter A3b

Inflow Area = 2.104 ac, 11.83% Impervious, Inflow Depth = 0.51" for 1 Year - North Salem event
 Inflow = 0.85 cfs @ 12.14 hrs, Volume= 0.090 af
 Outflow = 0.85 cfs @ 12.14 hrs, Volume= 0.090 af, Atten= 0%, Lag= 0.0 min
 Primary = 0.85 cfs @ 12.14 hrs, Volume= 0.090 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 351.78' @ 12.14 hrs
 Flood Elev= 358.26'

Device	Routing	Invert	Outlet Devices
#1	Primary	351.16'	8.0" Round Outlet to Sand Filter L= 16.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 351.00' S= 0.0100 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	351.80'	15.0" Round Outlet to DP L= 178.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 336.33' S= 0.0869 '/' Cc= 0.900 n= 0.020 Corrugated PE, corrugated interior

Primary OutFlow Max=0.84 cfs @ 12.14 hrs HW=351.77' (Free Discharge)

↑1=Outlet to Sand Filter (Barrel Controls 0.84 cfs @ 3.25 fps)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=351.16' (Free Discharge)

↑2=Outlet to DP (Controls 0.00 cfs)

Summary for Pond FS A3a: Flow Splitter A3a

Inflow Area = 0.702 ac, 12.82% Impervious, Inflow Depth = 0.86" for 2 Year - North Salem event
 Inflow = 0.60 cfs @ 12.11 hrs, Volume= 0.050 af
 Outflow = 0.60 cfs @ 12.11 hrs, Volume= 0.050 af, Atten= 0%, Lag= 0.0 min
 Primary = 0.51 cfs @ 12.11 hrs, Volume= 0.049 af
 Secondary = 0.09 cfs @ 12.11 hrs, Volume= 0.001 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 339.60' @ 12.11 hrs
 Flood Elev= 358.26'

Device	Routing	Invert	Outlet Devices
#1	Primary	339.16'	8.0" Round Outlet to Sand Filter L= 16.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 339.00' S= 0.0100 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	339.50'	15.0" Round Outlet to DP L= 156.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 333.00' S= 0.0417 '/' Cc= 0.900 n= 0.020 Corrugated PE, corrugated interior

Primary OutFlow Max=0.50 cfs @ 12.11 hrs HW=339.60' (Free Discharge)

↑1=Outlet to Sand Filter (Barrel Controls 0.50 cfs @ 2.93 fps)

Secondary OutFlow Max=0.05 cfs @ 12.11 hrs HW=339.60' (Free Discharge)

↑2=Outlet to DP (Inlet Controls 0.05 cfs @ 1.06 fps)

Stage-Area-Storage for Pond FS A3a: Flow Splitter A3a (continued)

Elevation (feet)	Storage (cubic-feet)
358.24	0

Summary for Pond FS A3b: Flow Splitter A3b

Inflow Area = 2.104 ac, 11.83% Impervious, Inflow Depth = 0.81" for 2 Year - North Salem event
 Inflow = 1.58 cfs @ 12.12 hrs, Volume= 0.142 af
 Outflow = 1.58 cfs @ 12.12 hrs, Volume= 0.142 af, Atten= 0%, Lag= 0.0 min
 Primary = 1.26 cfs @ 12.12 hrs, Volume= 0.138 af
 Secondary = 0.31 cfs @ 12.12 hrs, Volume= 0.003 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 352.06' @ 12.12 hrs
 Flood Elev= 358.26'

Device	Routing	Invert	Outlet Devices
#1	Primary	351.16'	8.0" Round Outlet to Sand Filter L= 16.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 351.00' S= 0.0100 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	351.80'	15.0" Round Outlet to DP L= 178.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 336.33' S= 0.0869 '/' Cc= 0.900 n= 0.020 Corrugated PE, corrugated interior

Primary OutFlow Max=1.23 cfs @ 12.12 hrs HW=352.04' (Free Discharge)

↑1=Outlet to Sand Filter (Barrel Controls 1.23 cfs @ 3.52 fps)

Secondary OutFlow Max=0.28 cfs @ 12.12 hrs HW=352.04' (Free Discharge)

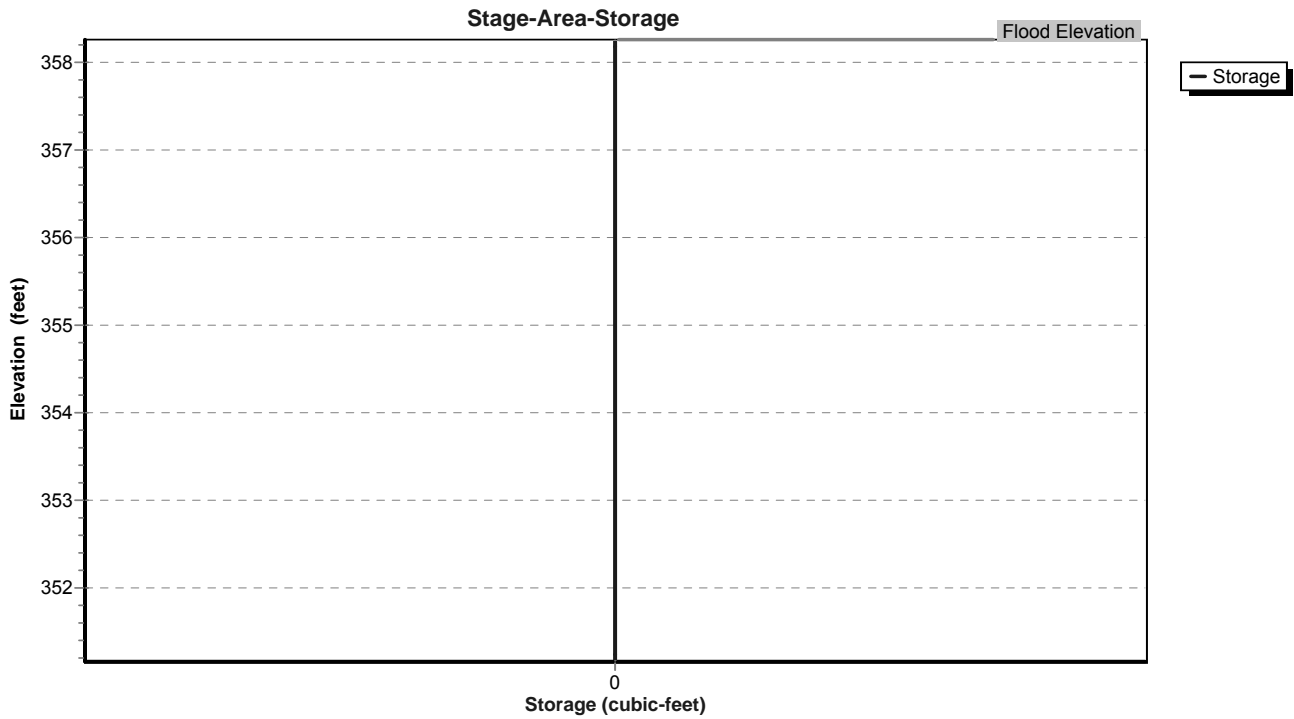

↑2=Outlet to DP (Inlet Controls 0.28 cfs @ 1.67 fps)

Summary for Pond SF-A3a: Sand Filter - A3a

[79] Warning: Submerged Pond SFF-A3a Primary device # 1 OUTLET by 0.04'

Inflow Area = 0.702 ac, 12.82% Impervious, Inflow Depth = 1.81" for 10 Year - North Salem event
 Inflow = 0.91 cfs @ 12.17 hrs, Volume= 0.106 af
 Outflow = 0.36 cfs @ 12.71 hrs, Volume= 0.106 af, Atten= 60%, Lag= 32.5 min
 Primary = 0.36 cfs @ 12.71 hrs, Volume= 0.106 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 336.94' @ 12.71 hrs Surf.Area= 959 sf Storage= 1,329 cf

Plug-Flow detention time= 448.1 min calculated for 0.106 af (100% of inflow)
 Center-of-Mass det. time= 447.4 min (1,338.2 - 890.8)

Volume	Invert	Avail.Storage	Storage Description

#5	Device 1	351.00'	24.0" x 24.0" Horiz. Top of Outlet Box C= 0.600 Limited to weir flow at low heads
#6	Secondary	351.00'	8.0' long Sharp-Crested Rectangular Weir 2 End Contraction(s) 0.5' Crest Height

Primary OutFlow Max=1.36 cfs @ 12.39 hrs HW=350.12' (Free Discharge)

- ↑ 1=Outlet Pipe (Passes 1.36 cfs of 7.23 cfs potential flow)
- ↑ 2=Standpipe Openings (Orifice Controls 0.51 cfs @ 5.21 fps)
- ↑ 3=Top of Standpipe (Weir Controls 0.44 cfs @ 1.14 fps)
- ↑ 4=Orifice #1 (Orifice Controls 0.41 cfs @ 1.12 fps)
- ↑ 5=Top of Outlet Box (Controls 0.00 cfs)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=348.00' (Free Discharge)

- ↑ 6=Sharp-Crested Rectangular Weir (Controls 0.00 cfs)

Summary for Pond SF-A3a: Sand Filter - A3a

[79] Warning: Submerged Pond SFF-A3a Primary device # 1 INLET by 0.01'

Inflow Area = 0.702 ac, 12.82% Impervious, Inflow Depth = 2.64" for 25 Year - North Salem event
 Inflow = 1.22 cfs @ 12.11 hrs, Volume= 0.155 af
 Outflow = 0.84 cfs @ 12.32 hrs, Volume= 0.155 af, Atten= 31%, Lag= 12.6 min
 Primary = 0.84 cfs @ 12.32 hrs, Volume= 0.155 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 337.01' @ 12.32 hrs Surf.Area= 981 sf Storage= 1,398 cf

Plug-Flow detention time= 313.8 min calculated for 0.155 af (100% of inflow)
 Center-of-Mass det. time= 313.1 min (1,195.8 - 882.8)

Volume	Invert	Avail.Storage	Storage Description			
#1	335.00'	2,531 cf	Custom Stage Data (Irregular) Listed below (Recalc)

Summary for Pond SF-A3b: Sand Filter - A3b

Inflow Area = 2.104 ac, 11.83% Impervious, Inflow Depth = 2.31" for 25 Year - North Salem event
 Inflow = 1.93 cfs @ 12.19 hrs, Volume= 0.404 af
 Outflow = 0.91 cfs @ 12.94 hrs, Volume= 0.404 af, Atten= 53%, Lag= 44.8 min
 Primary = 0.91 cfs @ 12.94 hrs, Volume= 0.404 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 344.42' @ 12.94 hrs Surf.Area= 2,072 sf Storage= 4,049 cf

Plug-Flow detention time= 547.2 min calculated for 0.404 af (100% of inflow)
 Center-of-Mass det. time= 547.0 min (1,490.3 - 943.3)

Volume	Invert	Avail.Storage	Storage Description		
#1	342.00'	7,770 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
342.00	1,296	145.0	0	0	1,296

Summary for Pond SF-A3a: Sand Filter - A3a

[79] Warning: Submerged Pond SFF-A3a Primary device # 1 INLET by 0.08'

Inflow Area = 0.702 ac, 12.82% Impervious, Inflow Depth = 3.75" for 100 Year - North Salem event
 Inflow = 1.46 cfs @ 12.10 hrs, Volume= 0.219 af
 Outflow = 1.42 cfs @ 12.14 hrs, Volume= 0.219 af, Atten= 3%, Lag= 2.5 min
 Primary = 1.42 cfs @ 12.14 hrs, Volume= 0.219 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 337.08' @ 12.14 hrs Surf.Area= 1,002 sf Storage= 1,465 cf

Plug-Flow detention time= 226.1 min calculated for 0.219 af (100% of inflow)
 Center-of-Mass det. time= 227.1 min (1,102.8 - 875.7)

Volume	Invert	Avail.Storage	Storage Description		
#1	335.00'	2,531 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
335.00	432	111.0	0	0	432
336.00	693	141.0	557	557	1,047
338.00	1,313	168.0	1,973	2,531	1,779

Device	Routing	Invert	Outlet Devices
#1	Primary	332.50'	12.0" Round Outlet Pipe L= 80.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 332.10' S= 0.0050 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Device 1	335.00'	1.750 in/hr Exfiltration over Surface area above 335.00' Excluded Surface area = 432 sf
#3	Device 1	336.85'	48.0" W x 48.0" H Vert. Top of Outlet Box C= 0.600
#4	Secondary	337.10'	10.0' long Emergency Overflow 2 End Contraction(s) 1.0' Crest Height

Primary OutFlow Max=1.40 cfs @ 12.14 hrs HW=337.08' (Free Discharge)
 ↑ 1=Outlet Pipe (Passes 1.40 cfs of 6.74 cfs potential flow)
 ↑ 2=Exfiltration (Exfiltration Controls 0.02 cfs)
 ↑ 3=Top of Outlet Box (Orifice Controls 1.38 cfs @ 1.53 fps)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=335.00' (Free Discharge)
 ↑ 4=Emergency Overflow (Controls 0.00 cfs)

Summary for Pond SF-A3b: Sand Filter - A3b

Inflow Area = 2.104 ac, 11.83% Impervious, Inflow Depth = 3.23" for 100 Year - North Salem event
 Inflow = 2.65 cfs @ 12.15 hrs, Volume= 0.567 af
 Outflow = 1.61 cfs @ 12.52 hrs, Volume= 0.567 af, Atten= 39%, Lag= 22.7 min
 Primary = 1.61 cfs @ 12.52 hrs, Volume= 0.567 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 344.62' @ 12.52 hrs Surf.Area= 2,142 sf Storage= 4,468 cf

Plug-Flow detention time= 398.7 min calculated for 0.567 af (100% of inflow)
 Center-of-Mass det. time= 400.8 min (1,332.7 - 931.9)

Volume	Invert	Avail.Storage	Storage Description		
#1	342.00'	7,770 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
342.00	1,296	145.0	0	0	1,296

Summary for Pond SFF-A3a: Sand Filter Forebay - A3a

Inflow Area = 0.702 ac, 12.82% Impervious, Inflow Depth = 3.75" for 100 Year - North Salem event
 Inflow = 1.47 cfs @ 12.10 hrs, Volume= 0.219 af
 Outflow = 1.46 cfs @ 12.10 hrs, Volume= 0.219 af, Atten= 0%, Lag= 0.4 min
 Primary = 1.46 cfs @ 12.10 hrs, Volume= 0.219 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 338.84' @ 12.10 hrs Surf.Area= 464 sf Storage= 600 cf

Plug-Flow detention time= 19.6 min calculated for 0.219 af (100% of inflow)
 Center-of-Mass det. time= 19.7 min (875.7 - 856.0)

Volume	Invert	Avail.Storage	Storage Description		
#1	337.00'	1,253 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
337.00	200	57.0	0	0	200
338.00	336	71.0	265	265	356

Summary for Pond SFF-A3b: Sand Filter Forebay - A3b

Inflow Area = 2.104 ac, 11.83% Impervious, Inflow Depth = 3.23" for 100 Year - North Salem event
 Inflow = 2.77 cfs @ 12.11 hrs, Volume= 0.567 af
 Outflow = 2.65 cfs @ 12.15 hrs, Volume= 0.567 af, Atten= 4%, Lag= 2.2 min
 Primary = 2.65 cfs @ 12.15 hrs, Volume= 0.567 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 350.22' @ 12.15 hrs Surf.Area= 1,718 sf Storage= 2,620 cf

Plug-Flow detention time= 56.1 min calculated for 0.567 af (100% of inflow)
 Center-of-Mass det. time= 56.0 min (931.9 - 876.0)

Volume	Invert	Avail.Storage	Storage Description			
#1	348.00'	6,570 cf	Custom Stage Data (Irregular) Listed below (Recalc)			
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond DP 2: Design Point 2

[40] Hint: Not Described (Outflow=Inflow)

Inflow Area = 9.054 ac, 8.75% Impervious, Inflow Depth = 0.44" for 1 Year - North Salem event
Inflow = 0.56 cfs @ 12.33 hrs, Volume= 0.328 af
Primary = 0.56 cfs @ 12.33 hrs, Volume= 0.328 af, Atten= 0%, Lag= 0.0 min

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs

Pond DP 2: Design Point 2

Hydrograph

Summary for Pond FS B2: Flow Splitter B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 0.59" for 1 Year - North Salem event
 Inflow = 2.05 cfs @ 12.19 hrs, Volume= 0.224 af
 Outflow = 2.05 cfs @ 12.19 hrs, Volume= 0.224 af, Atten= 0%, Lag= 0.0 min
 Primary = 2.05 cfs @ 12.19 hrs, Volume= 0.224 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 463.82' @ 12.19 hrs
 Flood Elev= 468.26'

Device	Routing	Invert	Outlet Devices
#1	Primary	462.00'	8.0" Round Outlet to Sand Filter L= 16.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 461.68' S= 0.0200 '/' Cc= 0.900 n= 0.010 PVC, smooth interior

Summary for Pond SFF-B2: Sand Filter Forebay - B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 0.59" for 1 Year - North Salem event
 Inflow = 2.05 cfs @ 12.19 hrs, Volume= 0.224 af
 Outflow = 0.47 cfs @ 12.94 hrs, Volume= 0.224 af, Atten= 77%, Lag= 44.8 min
 Primary = 0.47 cfs @ 12.94 hrs, Volume= 0.224 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 457.95' @ 12.94 hrs Surf.Area= 1,897 sf Storage= 2,818 cf

Plug-Flow detention time= 107.6 min calculated for 0.224 af (100% of inflow)
 Center-of-Mass det. time= 107.7 min (1,006.4 - 898.7)

Volume	Invert	Avail.Storage	Storage Description		
#1	456.00'	7,839 cf	Custom Stage Data (Irregular) Listed below (Recalc)

Device	Routing	Invert	Outlet Devices
#1	Primary	456.00'	12.0" Round Outlet Pipe L= 86.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 440.00' S= 0.1860 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Device 1	456.00'	1.0" Vert. Standpipe Openings X 3.00 columns X 6 rows with 4.0" cc spacing C= 0.600
#3	Device 1	458.55'	12.0" Horiz. Top of Standpipe C= 0.600 Limited to weir flow at low heads
#4	Secondary	459.00'	8.0' long Emergency Overflow 2 End Contraction(s) 0.5' Crest Height

Primary OutFlow Max=0.47 cfs @ 12.94 hrs HW=457.95' (Free Discharge)
 ↑ 1=Outlet Pipe (Passes 0.47 cfs of 4.55 cfs potential flow)
 ↑ 2=Standpipe Openings (Orifice Controls 0.47 cfs @ 4.77 fps)
 ↑ 3=Top of Standpipe (Controls 0.00 cfs)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=456.00' (Free Discharge)
 ↑ 4=Emergency Overflow (Controls 0.00 cfs)

Summary for Pond SFF-B2: Sand Filter Forebay - B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 0.86" for 2 Year - North Salem event
 Inflow = 2.34 cfs @ 12.17 hrs, Volume= 0.325 af
 Outflow = 0.77 cfs @ 12.82 hrs, Volume= 0.325 af, Atten= 67%, Lag= 39.0 min
 Primary = 0.77 cfs @ 12.82 hrs, Volume= 0.325 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 458.61' @ 12.82 hrs Surf.Area= 2,237 sf Storage= 4,190 cf

Plug-Flow detention time= 107.0 min calculated for 0.325 af (100% of inflow)
 Center-of-Mass det. time= 107.1 min (999.1 - 892.0)

Volume	Invert	Avail.Storage	Storage Description		
#1	456.00'	7,839 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SFF-B2: Sand Filter Forebay - B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 1.63" for 10 Year - North Salem event
 Inflow = 2.70 cfs @ 12.16 hrs, Volume= 0.613 af
 Outflow = 2.38 cfs @ 12.49 hrs, Volume= 0.613 af, Atten= 12%, Lag= 19.7 min
 Primary = 2.38 cfs @ 12.49 hrs, Volume= 0.613 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 458.85' @ 12.49 hrs Surf.Area= 2,369 sf Storage= 4,751 cf

Plug-Flow detention time= 85.4 min calculated for 0.613 af (100% of inflow)
 Center-of-Mass det. time= 85.2 min (976.4 - 891.2)

Volume	Invert	Avail.Storage	Storage Description			
#1	456.00'	7,839 cf	Custom Stage Data (Irregular) Listed below (Recalc)			
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SF-B2: Sand Filter - B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 2.26" for 25 Year - North Salem event
 Inflow = 2.79 cfs @ 12.27 hrs, Volume= 0.852 af
 Outflow = 1.41 cfs @ 13.72 hrs, Volume= 0.852 af, Atten= 50%, Lag= 87.0 min
 Primary = 1.41 cfs @ 13.72 hrs, Volume= 0.852 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 437.56' @ 13.72 hrs Surf.Area= 4,086 sf Storage= 11,036 cf

Plug-Flow detention time= 763.9 min calculated for 0.852 af (100% of inflow)
 Center-of-Mass det. time= 766.0 min (1,731.1 - 965.1)

Volume	Invert	Avail.Storage	Storage Description		
#1	434.00'	17,563 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
434.00	2,184	246.0	0	0	2,184
436.00	3,218	271.0	5,369	5,369	3,335
438.00	4,353	297.0	7,542	12,911	4,640
439.00	4,958	310.0	4,652	17,563	5,338

Device	Routing	Invert	Outlet Devices
#1	Primary	431.50'	12.0" Round Outlet Pipe L= 40.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 428.00' S= 0.0875 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Device 1	434.00'	1.750 in/hr Exfiltration over Surface area above 434.00' Excluded Surface area = 2,184 sf
#3	Device 1	437.00'	12.0" W x 12.0" H Vert. Orifice #1 C= 0.600
#4	Device 1	438.00'	36.0" x 36.0" Horiz. Top of Outlet Box C= 0.600 Limited to weir flow at low heads
#5	Secondary	438.00'	10.0' long Emergency Overflow 2 End Contraction(s) 1.0' Crest Height

Primary OutFlow Max=1.41 cfs @ 13.72 hrs HW=437.56' (Free Discharge)

- ↑ 1=Outlet Pipe (Passes 1.41 cfs of 7.86 cfs potential flow)
- ↑ 2=Exfiltration (Exfiltration Controls 0.08 cfs)
- ↑ 3=Orifice #1 (Orifice Controls 1.33 cfs @ 2.39 fps)
- ↑ 4=Top of Outlet Box (Controls 0.00 cfs)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=434.00' (Free Discharge)

- ↑ 5=Emergency Overflow (Controls 0.00 cfs)

Summary for Pond SFF-B2: Sand Filter Forebay - B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 2.26" for 25 Year - North Salem event
 Inflow = 2.94 cfs @ 12.16 hrs, Volume= 0.852 af
 Outflow = 2.79 cfs @ 12.27 hrs, Volume= 0.852 af, Atten= 5%, Lag= 6.9 min
 Primary = 2.79 cfs @ 12.27 hrs, Volume= 0.852 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 458.90' @ 12.27 hrs Surf.Area= 2,394 sf Storage= 4,860 cf

Plug-Flow detention time= 74.5 min calculated for 0.852 af (100% of inflow)
 Center-of-Mass det. time= 74.6 min (965.1 - 890.5)

Volume	Invert	Avail.Storage	Storage Description		
#1	456.00'	7,839 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
456.00	1,042	128.0	0	0	1,042

Summary for Pond SF-B2: Sand Filter - B2

Inflow Area = 4.525 ac, 17.50% Impervious, Inflow Depth = 3.08" for 100 Year - North Salem event
 Inflow = 3.09 cfs @ 12.25 hrs, Volume= 1.162 af
 Outflow = 2.14 cfs @ 13.37 hrs, Volume= 1.162 af, Atten= 31%, Lag= 67.2 min
 Primary = 2.14 cfs @ 13.37 hrs, Volume= 1.162 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 437.74' @ 13.37 hrs Surf.Area= 4,198 sf Storage= 11,816 cf

Plug-Flow detention time= 578.7 min calculated for 1.162 af (100% of inflow)
 Center-of-Mass det. time= 578.6 min (1,532.9 - 954.4)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond S-16: Underground Infiltration (Sub-Lot 16)

Inflow Area = 0.559 ac, 25.04% Impervious, Inflow Depth = 0.72" for 1 Year - North Salem event
 Inflow = 0.37 cfs @ 12.14 hrs, Volume= 0.034 af
 Outflow = 0.36 cfs @ 12.16 hrs, Volume= 0.034 af, Atten= 2%, Lag= 0.9 min
 Discarded = 0.36 cfs @ 12.16 hrs, Volume= 0.034 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 415.52' @ 12.16 hrs Surf.Area= 0.054 ac Storage= 0.000 af

Plug-Flow detention time= 0.8 min calculated for 0.034 af (100% of inflow)
 Center-of-Mass det. time= 0.8 min (885.0 - 884.2)

Volume	Invert	Avail.Storage	Storage Description
#1A	415.50'	0.032 af	60.00'W x 39.50'L x 2.54'H Field A 0.138 af Overall - 0.041 af Embedded = 0.097 af x 33.3% Voids
#2A	416.00'	0.041 af	Cultec R-150 x 90 Inside #1 Effective Size= 29.8"W x 18.0"H => 2.65 sf x 7.50'L = 19.9 cf Overall Size= 33.0"W x 18.5"H x 8.50'L with 1.00' Overlap
		0.073 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	415.50'	7.800 in/hr Exfiltration over Surface area
#2	Primary	417.75'	6.0" Vert. Orifice/Grate X 2.00 C= 0.600

Discarded OutFlow Max=0.43 cfs @ 12.16 hrs HW=415.52' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.43 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=415.50' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond S-14: Underground Infiltration (Sub-Lot 14)

Inflow Area = 0.762 ac, 20.34% Impervious, Inflow Depth = 0.96" for 2 Year - North Salem event
 Inflow = 0.69 cfs @ 12.15 hrs, Volume= 0.061 af
 Outflow = 0.68 cfs @ 12.15 hrs, Volume= 0.061 af, Atten= 1%, Lag= 0.2 min
 Discarded = 0.68 cfs @ 12.15 hrs, Volume= 0.061 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 440.02' @ 12.15 hrs Surf.Area= 0.028 ac Storage= 0.000 af

Plug-Flow detention time= 0.2 min calculated for 0.061 af (100% of inflow)
 Center-of-Mass det. time= 0.2 min (878.2 - 878.0)

Volume	Invert	Avail.Storage	Storage Description
#1A	440.00'	0.017 af	26.00'W x 46.31'L x 2.71'H Field A 0.075 af Overall - 0.024 af Embedded = 0.050 af x 33.3% Voids
#2A	440.50'	0.024 af	Cultec R-180 x 49 Inside #1 Effective Size= 33.6"W x 20.0"H => 3.44 sf x 6.33'L = 21.8 cf Overall Size= 36.0"W x 20.5"H x 7.33'L with 1.00' Overlap
		0.041 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	440.00'	30.000 in/hr Exfiltration over Surface area
#2	Primary	441.94'	6.0" Vert. Orifice/Grate X 5.00 C= 0.600

Discarded OutFlow Max=0.84 cfs @ 12.15 hrs HW=440.02' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.84 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=440.00' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond S-15: Underground Infiltration (Sub-Lot 15)

Inflow Area = 0.489 ac, 26.58% Impervious, Inflow Depth = 1.13" for 2 Year - North Salem event
 Inflow = 0.52 cfs @ 12.16 hrs, Volume= 0.046 af
 Outflow = 0.38 cfs @ 12.10 hrs, Volume= 0.046 af, Atten= 27%, Lag= 0.0 min
 Discarded = 0.38 cfs @ 12.10 hrs, Volume= 0.046 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 433.56' @ 12.29 hrs Surf.Area= 0.037 ac Storage= 0.002 af

Plug-Flow detention time= (not calculated: outflow precedes inflow)
 Center-of-Mass det. time= 0.6 min (870.1 - 869.5)

Volume	Invert	Avail.Storage	Storage Description
#1A	433.42'	0.022 af	34.00'W x 47.00'L x 2.54'H Field A 0.093 af Overall - 0.027 af Embedded = 0.066 af x 33.3% Voids
#2A	433.92'	0.027 af	Cultec R-150 x 60 Inside #1 Effective Size= 29.8"W x 18.0"H => 2.65 sf x 7.50'L = 19.9 cf Overall Size= 33.0"W x 18.5"H x 8.50'L with 1.00' Overlap
		0.049 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	433.42'	10.200 in/hr Exfiltration over Surface area
#2	Primary	435.45'	4.0" Vert. Orifice/Grate X 7.00 C= 0.600

Discarded OutFlow Max=0.38 cfs @ 12.10 hrs HW=433.45' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.38 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=433.42' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond S-16: Underground Infiltration (Sub-Lot 16)

Inflow Area = 0.559 ac, 25.04% Impervious, Inflow Depth = 1.08" for 2 Year - North Salem event
 Inflow = 0.59 cfs @ 12.14 hrs, Volume= 0.050 af
 Outflow = 0.43 cfs @ 12.10 hrs, Volume= 0.050 af, Atten= 27%, Lag= 0.0 min
 Discarded = 0.43 cfs @ 12.10 hrs, Volume= 0.050 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 415.60' @ 12.25 hrs Surf.Area= 0.054 ac Storage= 0.002 af

Plug-Flow detention time= 1.8 min calculated for 0.050 af (100% of inflow)
 Center-of-Mass det. time= 1.3 min (872.3 - 870.9)

Volume	Invert	Avail.Storage	Storage Description
#1A	415.50'	0.032 af	60.00'W x 39.50'L x 2.54'H Field A 0.138 af Overall - 0.041 af Embedded = 0.097 af x 33.3% Voids
#2A	416.00'	0.041 af	Cultec R-150 x 90 Inside #1 Effective Size= 29.8"W x 18.0"H => 2.65 sf x 7.50'L = 19.9 cf Overall Size= 33.0"W x 18.5"H x 8.50'L with 1.00' Overlap
		0.073 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	415.50'	7.800 in/hr Exfiltration over Surface area
#2	Primary	417.75'	6.0" Vert. Orifice/Grate X 2.00 C= 0.600

Discarded OutFlow Max=0.43 cfs @ 12.10 hrs HW=415.54' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.43 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=415.50' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond S-16: Underground Infiltration (Sub-Lot 16)

Inflow Area = 0.559 ac, 25.04% Impervious, Inflow Depth = 2.33" for 10 Year - North Salem event
 Inflow = 1.35 cfs @ 12.13 hrs, Volume= 0.108 af
 Outflow = 0.43 cfs @ 11.95 hrs, Volume= 0.108 af, Atten= 68%, Lag= 0.0 min
 Discarded = 0.43 cfs @ 11.95 hrs, Volume= 0.108 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 416.25' @ 12.51 hrs Surf.Area= 0.054 ac Storage= 0.020 af

Plug-Flow detention time= 10.9 min calculated for 0.108 af (100% of inflow)
 Center-of-Mass det. time= 10.6 min (857.9 - 847.3)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond S-14: Underground Infiltration (Sub-Lot 14)

Inflow Area = 0.762 ac, 20.34% Impervious, Inflow Depth = 3.31" for 25 Year - North Salem event
 Inflow = 2.61 cfs @ 12.13 hrs, Volume= 0.210 af
 Outflow = 1.15 cfs @ 12.42 hrs, Volume= 0.209 af, Atten= 56%, Lag= 17.3 min
 Discarded = 0.84 cfs @ 11.95 hrs, Volume= 0.206 af
 Primary = 0.31 cfs @ 12.42 hrs, Volume= 0.003 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 442.09' @ 12.42 hrs Surf.Area= 0.028 ac Storage= 0.035 af

Plug-Flow detention time= (not calculated: outflow precedes inflow)
 Center-of-Mass det. time= 8.9 min (849.1 - 840.2)

Summary for Pond S-15: Underground Infiltration (Sub-Lot 15)

Inflow Area = 0.489 ac, 26.58% Impervious, Inflow Depth = 3.62" for 25 Year - North Salem event
 Inflow = 1.78 cfs @ 12.15 hrs, Volume= 0.147 af
 Outflow = 0.38 cfs @ 11.85 hrs, Volume= 0.148 af, Atten= 79%, Lag= 0.0 min
 Discarded = 0.38 cfs @ 11.85 hrs, Volume= 0.148 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 435.18' @ 12.65 hrs Surf.Area= 0.037 ac Storage= 0.039 af

Plug-Flow detention time= (not calculated: outflow precedes inflow)
 Center-of-Mass det. time= 27.9 min (862.8 - 834.8)

Volume	Invert	Avail.Storage	Storage Description
#1A	433.42'	0.022 af	34.00'W x 47.00'L x 2.54'H Field A 0.093 af Overall - 0.027 af Embedded = 0.066 af x 33.3% Voids
#2A	433.92'	0.027 af	Cultec R-150 x 60 Inside #1 Effective Size= 29.8"W x 18.0"H => 2.65 sf x 7.50'L = 19.9 cf Overall Size= 33.0"W x 18.5"H x 8.50'L with 1.00' Overlap
		0.049 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	433.42'	10.200 in/hr Exfiltration over Surface area
#2	Primary	435.45'	4.0" Vert. Orifice/Grate X 7.00 C= 0.600

Discarded OutFlow Max=0.38 cfs @ 11.85 hrs HW=433.46' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.38 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=433.42' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond S-16: Underground Infiltration (Sub-Lot 16)

Inflow Area = 0.559 ac, 25.04% Impervious, Inflow Depth = 3.51" for 25 Year - North Salem event
 Inflow = 2.09 cfs @ 12.12 hrs, Volume= 0.164 af
 Outflow = 0.43 cfs @ 11.80 hrs, Volume= 0.164 af, Atten= 79%, Lag= 0.0 min
 Discarded = 0.43 cfs @ 11.80 hrs, Volume= 0.164 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 416.82' @ 12.61 hrs Surf.Area= 0.054 ac Storage= 0.043 af

Plug-Flow detention time= (not calculated: outflow precedes inflow)
 Center-of-Mass det. time= 27.1 min (862.4 - 835.3)

Volume	Invert	Avail.Storage	Storage Description
#1A	415.50'	0.032 af	60.00'W x 39.50'L x 2.54'H Field A 0.138 af Overall - 0.041 af Embedded = 0.097 af x 33.3% Voids
#2A	416.00'	0.041 af	Cultec R-150 x 90 Inside #1 Effective Size= 29.8"W x 18.0"H => 2.65 sf x 7.50'L = 19.9 cf Overall Size= 33.0"W x 18.5"H x 8.50'L with 1.00' Overlap
		0.073 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	415.50'	7.800 in/hr Exfiltration over Surface area
#2	Primary	417.75'	6.0" Vert. Orifice/Grate X 2.00 C= 0.600

Discarded OutFlow Max=0.43 cfs @ 11.80 hrs HW=415.53' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.43 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=415.50' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond S-14: Underground Infiltration (Sub-Lot 14)

Inflow Area = 0.762 ac, 20.34% Impervious, Inflow Depth = 4.96" for 100 Year - North Salem event
 Inflow = 3.93 cfs @ 12.13 hrs, Volume= 0.315 af
 Outflow = 3.44 cfs @ 12.21 hrs, Volume= 0.315 af, Atten= 13%, Lag= 5.0 min
 Discarded = 0.84 cfs @ 11.80 hrs, Volume= 0.268 af
 Primary = 2.60 cfs @ 12.21 hrs, Volume= 0.047 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 442.49' @ 12.21 hrs Surf.Area= 0.028 ac Storage= 0.039 af

Plug-Flow detention time= 8.7 min calculated for 0.315 af (100% of inflow)
 Center-of-Mass det. time= 8.2 min (836.6 - 828.4)

Volume	Invert	Avail.Storage	Storage Description
#1A	440.00'	0.017 af	26.00'W x 46.31'L x 2.71'H Field A 0.075 af Overall - 0.024 af Embedded = 0.050 af x 33.3% Voids
#2A	440.50'	0.024 af	Cultec R-180 x 49 Inside #1 Effective Size= 33.6"W x 20.0"H => 3.44 sf x 6.33'L = 21.8 cf Overall Size= 36.0"W x 20.5"H x 7.33'L with 1.00' Overlap
		0.041 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	440.00'	30.000 in/hr Exfiltration over Surface area
#2	Primary	441.94'	6.0" Vert. Orifice/Grate X 5.00 C= 0.600

Discarded OutFlow Max=0.84 cfs @ 11.80 hrs HW=440.04' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.84 cfs)

Primary OutFlow Max=2.45 cfs @ 12.21 hrs HW=442.46' (Free Discharge)
 ↑2=Orifice/Grate (Orifice Controls 2.45 cfs @ 2.49 fps)

Summary for Pond B-G4a: Dry Basin - G4a

Inflow Area = 5.713 ac, 14.35% Impervious, Inflow Depth = 0.10" for 1 Year - North Salem event
 Inflow = 0.23 cfs @ 12.41 hrs, Volume= 0.046 af
 Outflow = 0.03 cfs @ 18.61 hrs, Volume= 0.046 af, Atten= 88%, Lag= 372.1 min
 Primary = 0.03 cfs @ 18.61 hrs, Volume= 0.046 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 421.14' @ 18.61 hrs Surf.Area= 1,117 sf Storage= 1,003 cf

Plug-Flow detention time= 482.9 min calculated for 0.046 af (100% of inflow)
 Center-of-Mass det. time= 483.1 min (1,435.1 - 951.9)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond DP 7-1: Design Point 7-1

[40] Hint: Not Described (Outflow=Inflow)

Inflow Area = 31.048 ac, 13.60% Impervious, Inflow Depth = 0.33" for 1 Year - North Salem event
Inflow = 4.27 cfs @ 12.47 hrs, Volume= 0.848 af
Primary = 4.27 cfs @ 12.47 hrs, Volume= 0.848 af, Atten= 0%, Lag= 0.0 min

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs

Pond DP 7-1: Design Point 7-1

Summary for Pond FS G1: Flow Splitter G1

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 0.82" for 1 Year - North Salem event
 Inflow = 1.75 cfs @ 12.16 hrs, Volume= 0.161 af
 Outflow = 1.75 cfs @ 12.16 hrs, Volume= 0.161 af, Atten= 0%, Lag= 0.0 min
 Primary = 1.75 cfs @ 12.16 hrs, Volume= 0.161 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 524.53' @ 12.16 hrs
 Flood Elev= 527.50'

Device	Routing	Invert	Outlet Devices
#1	Primary	523.12'	8.0" Round Outlet to Sand Filter L= 12.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 523.00' S= 0.0100 ' /' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	524.53'	18.0" Round Outlet to Dry Basin L= 57.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 517.50' S= 0.1233 ' /' Cc= 0.900 n= 0.020 Corrugated PE, corrugated interior

Primary OutFlow Max=1.71 cfs @ 12.16 hrs HW=524.49' (Free Discharge)
 ↳1=Outlet to Sand Filter (Inlet Controls 1.71 cfs @ 4.91 fps)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=523.12' (Free Discharge)
 ↳2=Outlet to Dry Basin (Controls 0.00 cfs)

Summary for Pond I-G2: Infiltration Basin-G2

Inflow Area = 6.667 ac, 23.94% Impervious, Inflow Depth = 0.92" for 1 Year - North Salem event
 Inflow = 5.74 cfs @ 12.16 hrs, Volume= 0.511 af
 Outflow = 3.80 cfs @ 12.33 hrs, Volume= 0.511 af, Atten= 34%, Lag= 10.1 min
 Discarded = 3.80 cfs @ 12.33 hrs, Volume= 0.511 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 448.20' @ 12.33 hrs Surf.Area= 6,839 sf Storage= 1,376 cf

Plug-Flow detention time= 2.6 min calculated for 0.511 af (100% of inflow)
 Center-of-Mass det. time= 2.6 min (874.0 - 871.3)

Summary for Pond I-G3b: Infiltration Basin-G3b

Inflow Area = 3.720 ac, 22.04% Impervious, Inflow Depth = 0.64" for 1 Year - North Salem event
 Inflow = 1.82 cfs @ 12.20 hrs, Volume= 0.197 af
 Outflow = 1.12 cfs @ 12.48 hrs, Volume= 0.197 af, Atten= 38%, Lag= 16.4 min
 Discarded = 1.12 cfs @ 12.48 hrs, Volume= 0.197 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 440.15' @ 12.48 hrs Surf.Area= 4,766 sf Storage= 700 cf

Plug-Flow detention time= 4.4 min calculated for 0.197 af (100% of inflow)
 Center-of-Mass det. time= 4.4 min (900.0 - 895.6)

Volume	Invert	Avail.Storage	Storage Description		
#1	440.00'	23,649 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SF-G1: Sand Filter - G1

[79] Warning: Submerged Pond SFF-G1 Primary device # 1 OUTLET by 0.09'

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 0.82" for 1 Year - North Salem event
 Inflow = 0.66 cfs @ 12.55 hrs, Volume= 0.161 af
 Outflow = 0.12 cfs @ 16.90 hrs, Volume= 0.161 af, Atten= 82%, Lag= 260.6 min
 Primary = 0.12 cfs @ 16.90 hrs, Volume= 0.161 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 519.59' @ 16.90 hrs Surf.Area= 3,191 sf Storage= 4,527 cf

Plug-Flow detention time= 2,113.6 min calculated for 0.161 af (100% of inflow)
 Center-of-Mass det. time= 2,115.0 min (3,043.5 - 928.5)

Volume	Invert	Avail.Storage	Storage Description			
#1	518.00'	13,908 cf	Custom Stage Data (Irregular) Listed below (Recalc)			
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SFF-G1: Sand Filter Forebay - G1

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 0.82" for 1 Year - North Salem event
 Inflow = 1.75 cfs @ 12.16 hrs, Volume= 0.161 af
 Outflow = 0.66 cfs @ 12.55 hrs, Volume= 0.161 af, Atten= 62%, Lag= 23.6 min
 Primary = 0.66 cfs @ 12.55 hrs, Volume= 0.161 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 522.04' @ 12.55 hrs Surf.Area= 1,098 sf Storage= 1,743 cf

Plug-Flow detention time= 50.2 min calculated for 0.161 af (100% of inflow)
 Center-of-Mass det. time= 50.1 min (928.5 - 878.4)

Volume	Invert	Avail.Storage	Storage Description		
#1	520.00'	4,411 cf	Custom Stage Data (Irregular) Listed below (Recalc)

Summary for Pond B-G4a: Dry Basin - G4a

Inflow Area = 5.713 ac, 14.35% Impervious, Inflow Depth = 0.17" for 2 Year - North Salem event
 Inflow = 0.56 cfs @ 12.27 hrs, Volume= 0.082 af
 Outflow = 0.04 cfs @ 20.20 hrs, Volume= 0.082 af, Atten= 93%, Lag= 475.6 min
 Primary = 0.04 cfs @ 20.20 hrs, Volume= 0.082 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 422.00' @ 20.20 hrs Surf.Area= 1,535 sf Storage= 2,140 cf

Plug-Flow detention time= 727.9 min calculated for 0.082 af (100% of inflow)
 Center-of-Mass det. time= 727.6 min (1,651.4 - 923.8)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond I-G3a: Infiltration Basin-G3a

Inflow Area = 3.341 ac, 35.74% Impervious, Inflow Depth = 1.65" for 2 Year - North Salem event
 Inflow = 4.80 cfs @ 12.22 hrs, Volume= 0.460 af
 Outflow = 1.18 cfs @ 12.76 hrs, Volume= 0.460 af, Atten= 75%, Lag= 32.7 min
 Discarded = 1.18 cfs @ 12.76 hrs, Volume= 0.460 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 400.86' @ 12.76 hrs Surf.Area= 6,557 sf Storage= 5,412 cf

Plug-Flow detention time= 31.8 min calculated for 0.460 af (100% of inflow)
 Center-of-Mass det. time= 31.8 min (881.8 - 849.9)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond I-G3b: Infiltration Basin-G3b

Inflow Area = 3.720 ac, 22.04% Impervious, Inflow Depth = 0.96" for 2 Year - North Salem event
 Inflow = 3.03 cfs @ 12.19 hrs, Volume= 0.299 af
 Outflow = 1.16 cfs @ 12.60 hrs, Volume= 0.299 af, Atten= 62%, Lag= 24.4 min
 Discarded = 1.16 cfs @ 12.60 hrs, Volume= 0.299 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 440.46' @ 12.60 hrs Surf.Area= 4,947 sf Storage= 2,205 cf

Plug-Flow detention time= 11.2 min calculated for 0.299 af (100% of inflow)
 Center-of-Mass det. time= 11.2 min (892.2 - 880.9)

Summary for Pond SF-G1: Sand Filter - G1

[79] Warning: Submerged Pond SFF-G1 Primary device # 1 OUTLET by 0.20'

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 1.15" for 2 Year - North Salem event
 Inflow = 0.85 cfs @ 12.58 hrs, Volume= 0.227 af
 Outflow = 0.31 cfs @ 14.67 hrs, Volume= 0.227 af, Atten= 63%, Lag= 125.4 min
 Primary = 0.31 cfs @ 14.67 hrs, Volume= 0.227 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 519.70' @ 14.67 hrs Surf.Area= 3,253 sf Storage= 4,873 cf

Plug-Flow detention time= 1,532.6 min calculated for 0.227 af (100% of inflow)
 Center-of-Mass det. time= 1,534.3 min (2,454.9 - 920.6)

Volume	Invert	Avail.Storage	Storage Description			
#1	518.00'	13,908 cf	Custom Stage Data (Irregular) Listed below (Recalc)			
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)	
518.00	2,523	196.0	0	0	2,523

Summary for Pond SFF-G1: Sand Filter Forebay - G1

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 1.15" for 2 Year - North Salem event
 Inflow = 2.01 cfs @ 12.16 hrs, Volume= 0.227 af
 Outflow = 0.85 cfs @ 12.58 hrs, Volume= 0.227 af, Atten= 58%, Lag= 25.3 min
 Primary = 0.85 cfs @ 12.58 hrs, Volume= 0.227 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 522.74' @ 12.58 hrs Surf.Area= 1,280 sf Storage= 2,565 cf

Plug-Flow detention time= 49.7 min calculated for 0.227 af (100% of inflow)
 Center-of-Mass det. time= 49.8 min (920.6 - 870.8)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond I-G2: Infiltration Basin-G2

Inflow Area = 6.667 ac, 23.94% Impervious, Inflow Depth = 2.68" for 10 Year - North Salem event
 Inflow = 17.97 cfs @ 12.15 hrs, Volume= 1.488 af
 Outflow = 4.52 cfs @ 12.60 hrs, Volume= 1.488 af, Atten= 75%, Lag= 27.2 min
 Discarded = 4.52 cfs @ 12.60 hrs, Volume= 1.488 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 450.20' @ 12.60 hrs Surf.Area= 8,142 sf Storage= 16,304 cf

Plug-Flow detention time= 23.3 min calculated for 1.488 af (100% of inflow)
 Center-of-Mass det. time= 23.3 min (862.4 - 839.1)

Volume	Invert	Avail.Storage	Storage Description		
#1	448.00'	52,387 cf	Custom Stage Data (Irregular) Listed below (Recalc)

Summary for Pond I-G3a: Infiltration Basin-G3a

Inflow Area = 3.341 ac, 35.74% Impervious, Inflow Depth = 3.14" for 10 Year - North Salem event
 Inflow = 9.25 cfs @ 12.21 hrs, Volume= 0.875 af
 Outflow = 1.33 cfs @ 13.06 hrs, Volume= 0.875 af, Atten= 86%, Lag= 51.1 min
 Discarded = 1.33 cfs @ 13.06 hrs, Volume= 0.875 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 402.09' @ 13.06 hrs Surf.Area= 7,368 sf Storage= 13,989 cf

Plug-Flow detention time= 90.1 min calculated for 0.874 af (100% of inflow)
 Center-of-Mass det. time= 90.1 min (921.4 - 831.3)

Volume	Invert	Avail.Storage	Storage Description		
#1	400.00'	31,667 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond I-G3b: Infiltration Basin-G3b

Inflow Area = 3.720 ac, 22.04% Impervious, Inflow Depth = 2.16" for 10 Year - North Salem event
 Inflow = 7.41 cfs @ 12.18 hrs, Volume= 0.669 af
 Outflow = 1.35 cfs @ 12.85 hrs, Volume= 0.669 af, Atten= 82%, Lag= 40.6 min
 Discarded = 1.35 cfs @ 12.85 hrs, Volume= 0.669 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 441.75' @ 12.85 hrs Surf.Area= 5,740 sf Storage= 9,122 cf

Plug-Flow detention time= 55.0 min calculated for 0.669 af (100% of inflow)
 Center-of-Mass det. time= 55.0 min (910.7 - 855.7)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond SF-G1: Sand Filter - G1

[79] Warning: Submerged Pond SFF-G1 Primary device # 1 OUTLET by 0.39'

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 2.10" for 10 Year - North Salem event
 Inflow = 2.56 cfs @ 12.26 hrs, Volume= 0.413 af
 Outflow = 0.81 cfs @ 13.54 hrs, Volume= 0.413 af, Atten= 68%, Lag= 76.4 min
 Primary = 0.81 cfs @ 13.54 hrs, Volume= 0.413 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 519.89' @ 13.54 hrs Surf.Area= 3,364 sf Storage= 5,505 cf

Plug-Flow detention time= 870.0 min calculated for 0.413 af (100% of inflow)
 Center-of-Mass det. time= 872.1 min (1,781.9 - 909.8)

Summary for Pond B-G4a: Dry Basin - G4a

Inflow Area = 5.713 ac, 14.35% Impervious, Inflow Depth = 1.07" for 25 Year - North Salem event
 Inflow = 4.71 cfs @ 12.50 hrs, Volume= 0.509 af
 Outflow = 3.71 cfs @ 12.66 hrs, Volume= 0.509 af, Atten= 21%, Lag= 9.8 min
 Primary = 3.71 cfs @ 12.66 hrs, Volume= 0.509 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 424.41' @ 12.66 hrs Surf.Area= 3,101 sf Storage= 7,636 cf

Plug-Flow detention time= 288.6 min calculated for 0.509 af (100% of inflow)
 Center-of-Mass det. time= 288.3 min (1,130.4 - 842.1)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond I-G2: Infiltration Basin-G2

Inflow Area = 6.667 ac, 23.94% Impervious, Inflow Depth = 3.94" for 25 Year - North Salem event
 Inflow = 26.50 cfs @ 12.15 hrs, Volume= 2.186 af
 Outflow = 5.50 cfs @ 12.64 hrs, Volume= 2.186 af, Atten= 79%, Lag= 29.9 min
 Discarded = 5.09 cfs @ 12.64 hrs, Volume= 2.177 af
 Primary = 0.41 cfs @ 12.64 hrs, Volume= 0.010 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 451.66' @ 12.64 hrs Surf.Area= 9,160 sf Storage= 28,939 cf

Plug-Flow detention time= 41.9 min calculated for 2.186 af (100% of inflow)
 Center-of-Mass det. time= 41.9 min (869.9 - 828.0)

Summary for Pond I-G3a: Infiltration Basin-G3a

Inflow Area = 3.341 ac, 35.74% Impervious, Inflow Depth = 4.47" for 25 Year - North Salem event
 Inflow = 13.13 cfs @ 12.21 hrs, Volume= 1.246 af
 Outflow = 4.56 cfs @ 12.62 hrs, Volume= 1.246 af, Atten= 65%, Lag= 24.7 min
 Discarded = 1.41 cfs @ 12.62 hrs, Volume= 1.112 af
 Primary = 3.15 cfs @ 12.62 hrs, Volume= 0.134 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 402.72' @ 12.62 hrs Surf.Area= 7,793 sf Storage= 18,729 cf

Plug-Flow detention time= 100.0 min calculated for 1.246 af (100% of inflow)
 Center-of-Mass det. time= 100.0 min (921.2 - 821.2)

Volume	Invert	Avail.Storage	Storage Description		
#1	400.00'	31,667 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond I-G3b: Infiltration Basin-G3b

Inflow Area = 3.720 ac, 22.04% Impervious, Inflow Depth = 3.31" for 25 Year - North Salem event
 Inflow = 11.66 cfs @ 12.17 hrs, Volume= 1.025 af
 Outflow = 4.24 cfs @ 12.56 hrs, Volume= 1.025 af, Atten= 64%, Lag= 23.1 min
 Discarded = 1.47 cfs @ 12.56 hrs, Volume= 0.900 af
 Primary = 2.77 cfs @ 12.56 hrs, Volume= 0.125 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 442.52' @ 12.56 hrs Surf.Area= 6,227 sf Storage= 13,684 cf

Plug-Flow detention time= 66.3 min calculated for 1.025 af (100% of inflow)
 Center-of-Mass det. time= 66.3 min (909.4 - 843.2)

Volume	Invert	Avail.Storage	Storage Description			
#1	440.00'	23,649 cf	Custom Stage Data (Irregular) Listed below (Recalc)			
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SF-G1: Sand Filter - G1

[79] Warning: Submerged Pond SFF-G1 Primary device # 1 INLET by 0.04'

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 2.86" for 25 Year - North Salem event
 Inflow = 2.83 cfs @ 12.12 hrs, Volume= 0.563 af
 Outflow = 1.77 cfs @ 12.67 hrs, Volume= 0.563 af, Atten= 37%, Lag= 33.3 min
 Primary = 1.77 cfs @ 12.67 hrs, Volume= 0.563 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 520.04' @ 12.67 hrs Surf.Area= 3,455 sf Storage= 6,027 cf

Plug-Flow detention time= 651.0 min calculated for 0.563 af (100% of inflow)
 Center-of-Mass det. time= 653.2 min (1,558.0 - 904.8)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond B-G4a: Dry Basin - G4a

Inflow Area = 5.713 ac, 14.35% Impervious, Inflow Depth = 2.20" for 100 Year - North Salem event
 Inflow = 13.50 cfs @ 12.35 hrs, Volume= 1.048 af
 Outflow = 13.20 cfs @ 12.41 hrs, Volume= 1.048 af, Atten= 2%, Lag= 3.3 min
 Primary = 13.20 cfs @ 12.41 hrs, Volume= 1.048 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 424.98' @ 12.41 hrs Surf.Area= 3,543 sf Storage= 9,510 cf

Plug-Flow detention time= 150.0 min calculated for 1.048 af (100% of inflow)
 Center-of-Mass det. time= 150.4 min (965.4 - 815.0)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond DP 7-1: Design Point 7-1

[40] Hint: Not Described (Outflow=Inflow)

Inflow Area = 31.048 ac, 13.60% Impervious, Inflow Depth = 3.17" for 100 Year - North Salem event
Inflow = 82.70 cfs @ 12.39 hrs, Volume= 8.206 af
Primary = 82.70 cfs @ 12.39 hrs, Volume= 8.206 af, Atten= 0%, Lag= 0.0 min

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs

Pond DP 7-1: Design Point 7-1

Hydrograph

Summary for Pond FS G1: Flow Splitter G1

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 5.46" for 100 Year - North Salem event
 Inflow = 12.95 cfs @ 12.15 hrs, Volume= 1.074 af
 Outflow = 12.95 cfs @ 12.15 hrs, Volume= 1.074 af, Atten= 0%, Lag= 0.0 min
 Primary = 3.00 cfs @ 12.15 hrs, Volume= 0.762 af
 Secondary = 9.95 cfs @ 12.15 hrs, Volume= 0.311 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 526.65' @ 12.15 hrs
 Flood Elev= 527.50'

Device	Routing	Invert	Outlet Devices
#1	Primary	523.12'	8.0" Round Outlet to Sand Filter L= 12.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 523.00' S= 0.0100 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	524.53'	18.0" Round Outlet to Dry Basin L= 57.0' CPP, square edge headwall, Ke= 0.500 Outlet Invert= 517.50' S= 0.1233 '/' Cc= 0.900 n= 0.020 Corrugated PE, corrugated interior

Primary OutFlow Max=2.99 cfs @ 12.15 hrs HW=526.62' (Free Discharge)
 ↳1=Outlet to Sand Filter (Inlet Controls 2.99 cfs @ 8.57 fps)

Secondary OutFlow Max=9.86 cfs @ 12.15 hrs HW=526.62' (Free Discharge)
 ↳2=Outlet to Dry Basin (Inlet Controls 9.86 cfs @ 5.58 fps)

Summary for Pond I-G2: Infiltration Basin-G2

Inflow Area = 6.667 ac, 23.94% Impervious, Inflow Depth = 5.71" for 100 Year - North Salem event
 Inflow = 38.25 cfs @ 12.14 hrs, Volume= 3.170 af
 Outflow = 13.66 cfs @ 12.49 hrs, Volume= 3.170 af, Atten= 64%, Lag= 20.6 min
 Discarded = 5.53 cfs @ 12.49 hrs, Volume= 2.762 af
 Primary = 8.13 cfs @ 12.49 hrs, Volume= 0.407 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 452.74' @ 12.49 hrs Surf.Area= 9,949 sf Storage= 39,290 cf

Plug-Flow detention time= 42.5 min calculated for 3.170 af (100% of inflow)
 Center-of-Mass det. time= 42.5 min (859.9 - 817.4)

Summary for Pond I-G3b: Infiltration Basin-G3b

Inflow Area = 3.720 ac, 22.04% Impervious, Inflow Depth = 4.96" for 100 Year - North Salem event
 Inflow = 17.63 cfs @ 12.17 hrs, Volume= 1.539 af
 Outflow = 10.40 cfs @ 12.38 hrs, Volume= 1.539 af, Atten= 41%, Lag= 12.6 min
 Discarded = 1.54 cfs @ 12.38 hrs, Volume= 1.111 af
 Primary = 8.86 cfs @ 12.38 hrs, Volume= 0.428 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 443.00' @ 12.38 hrs Surf.Area= 6,542 sf Storage= 16,759 cf

Plug-Flow detention time= 58.7 min calculated for 1.539 af (100% of inflow)
 Center-of-Mass det. time= 58.7 min (890.1 - 831.4)

Volume	Invert	Avail.Storage	Storage Description		
#1	440.00'	23,649 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SF-G1: Sand Filter - G1

[79] Warning: Submerged Pond SFF-G1 Primary device # 1 INLET by 0.08'

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 3.87" for 100 Year - North Salem event
 Inflow = 3.00 cfs @ 12.16 hrs, Volume= 0.762 af
 Outflow = 2.61 cfs @ 12.29 hrs, Volume= 0.762 af, Atten= 13%, Lag= 8.2 min
 Primary = 2.61 cfs @ 12.29 hrs, Volume= 0.762 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 520.08' @ 12.29 hrs Surf.Area= 3,476 sf Storage= 6,152 cf

Plug-Flow detention time= 491.5 min calculated for 0.762 af (100% of inflow)
 Center-of-Mass det. time= 493.8 min (1,391.6 - 897.8)

Volume	Invert	Avail.Storage	Storage Description			
#1	518.00'	13,908 cf	Custom Stage Data (Irregular) Listed below (Recalc)			
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SFF-G1: Sand Filter Forebay - G1

Inflow Area = 2.360 ac, 19.11% Impervious, Inflow Depth = 3.87" for 100 Year - North Salem event
 Inflow = 3.00 cfs @ 12.15 hrs, Volume= 0.762 af
 Outflow = 3.00 cfs @ 12.16 hrs, Volume= 0.762 af, Atten= 0%, Lag= 0.8 min
 Primary = 2.99 cfs @ 12.16 hrs, Volume= 0.762 af
 Secondary = 0.00 cfs @ 12.15 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 523.00' @ 12.16 hrs Surf.Area= 1,353 sf Storage= 2,915 cf

Plug-Flow detention time= 39.4 min calculated for 0.762 af (100% of inflow)
 Center-of-Mass det. time= 39.5 min (897.8 - 858.3)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond FS G7: Flow Splitter - G7

Inflow Area = 1.542 ac, 19.58% Impervious, Inflow Depth = 1.20" for 1 Year - North Salem event
 Inflow = 1.61 cfs @ 12.21 hrs, Volume= 0.154 af
 Outflow = 1.61 cfs @ 12.21 hrs, Volume= 0.154 af, Atten= 0%, Lag= 0.0 min
 Primary = 1.61 cfs @ 12.21 hrs, Volume= 0.154 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 456.82' @ 12.21 hrs
 Flood Elev= 554.50'

Device	Routing	Invert	Outlet Devices
#1	Primary	455.30'	8.0" Round Outlet to Sand Filter L= 20.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 455.10' S= 0.0100 ' S= 0.0100 ' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	456.90'	24.0" Round Outlet to Dry Basin L= 135.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 446.00' S= 0.0807 ' S= 0.0807 ' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior

Primary OutFlow Max=1.60 cfs @ 12.21 hrs HW=456.79' (Free Discharge)
 ↳1=Outlet to Sand Filter (Inlet Controls 1.60 cfs @ 4.57 fps)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=455.30' (Free Discharge)
 ↳2=Outlet to Dry Basin (Controls 0.00 cfs)

Summary for Pond SF-G5: Sand Filter - G5

Inflow Area = 2.297 ac, 23.55% Impervious, Inflow Depth = 0.64" for 1 Year - North Salem event
 Inflow = 0.54 cfs @ 12.58 hrs, Volume= 0.122 af
 Outflow = 0.03 cfs @ 24.21 hrs, Volume= 0.122 af, Atten= 94%, Lag= 697.7 min
 Primary = 0.03 cfs @ 24.21 hrs, Volume= 0.122 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 430.79' @ 24.21 hrs Surf.Area= 1,888 sf Storage= 4,095 cf

Plug-Flow detention time= 2,047.6 min calculated for 0.122 af (100% of inflow)
 Center-of-Mass det. time= 2,049.8 min (2,980.2 - 930.4)

Volume	Invert	Avail.Storage	Storage Description		
#1	428.00'	6,629 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
428.00	1,095	136.0	0	0	1,095
430.00	1,625	161.0	2,703	2,703	1,756

432.00	2,317	186.0	2,136	6,629	2,529

Device	Routing	Invert	Outlet Devices
#1	Primary	425.50'	12.0" Round Outlet Pipe L= 35.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 425.15' S= 0.0100 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Device 1	428.00'	1.750 in/hr Exfiltration over Surface area above 428.00' Excluded Surface area = 1,095 sf
#3	Device 1	430.90'	36.0" x 36.0" Horiz. Top of Outlet Box C= 0.600 Limited to weir flow at low heads
#4	Secondary	431.02'	10.0' long Emergency Overflow 2 End Contraction(s) 1.0' Crest Height

Primary OutFlow Max=0.03 cfs @ 24.21 hrs HW=430.79' (Free Discharge)

- ↑ 1=Outlet Pipe (Passes 0.03 cfs of 7.31 cfs potential flow)
- ↑ 2=Exfiltration (Exfiltration Controls 0.03 cfs)
- ↑ 3=Top of Outlet Box (Controls 0.00 cfs)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=428.00' (Free Discharge)

- ↑ 4=Emergency Overflow (Controls 0.00 cfs)

Summary for Pond SF-G6: Sand Filter - G6

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth = 1.20" for 1 Year - North Salem event
 Inflow = 2.06 cfs @ 12.60 hrs, Volume= 0.352 af
 Outflow = 0.18 cfs @ 18.43 hrs, Volume= 0.350 af, Atten= 91%, Lag= 349.7 min
 Primary = 0.18 cfs @ 18.43 hrs, Volume= 0.350 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 458.77' @ 18.43 hrs Surf.Area= 4,839 sf Storage= 11,500 cf

Plug-Flow detention time= 3,018.5 min calculated for 0.350 af (99% of inflow)
 Center-of-Mass det. time= 3,014.4 min (3,954.4 - 940.0)

Volume	Invert	Avail.Storage	Storage Description		
#1	456.00'	17,875 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
456.00	3,512	223.0	0	0	3,512
458.00	4,452	248.0	7,945	7,945	4,561

Summary for Pond SFF-G6: Sand Filter Forebay - G6

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth = 1.20" for 1 Year - North Salem event
 Inflow = 3.18 cfs @ 12.31 hrs, Volume= 0.352 af
 Outflow = 2.06 cfs @ 12.60 hrs, Volume= 0.352 af, Atten= 35%, Lag= 17.6 min
 Primary = 2.06 cfs @ 12.60 hrs, Volume= 0.352 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 462.87' @ 12.60 hrs Surf.Area= 2,090 sf Storage= 4,436 cf

Plug-Flow detention time= 75.1 min calculated for 0.352 af (100% of inflow)
 Center-of-Mass det. time= 75.2 min (940.0 - 864.7)

Summary for Pond SFF-G7: Sand Filter Forebay - G7

Inflow Area = 1.542 ac, 19.58% Impervious, Inflow Depth = 1.20" for 1 Year - North Salem event
 Inflow = 1.61 cfs @ 12.21 hrs, Volume= 0.154 af
 Outflow = 0.70 cfs @ 12.58 hrs, Volume= 0.154 af, Atten= 56%, Lag= 21.7 min
 Primary = 0.70 cfs @ 12.58 hrs, Volume= 0.154 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 454.19' @ 12.58 hrs Surf.Area= 1,048 sf Storage= 1,760 cf

Plug-Flow detention time= 45.9 min calculated for 0.154 af (100% of inflow)
 Center-of-Mass det. time= 45.7 min (904.6 - 858.9)

Volume	Invert	Avail.Storage	Storage Description		
#1	452.00'	4,075 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond B-G6: Dry Basin - G6

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth > 1.64" for 2 Year - North Salem event
 Inflow = 0.69 cfs @ 12.30 hrs, Volume= 0.482 af
 Outflow = 0.38 cfs @ 16.58 hrs, Volume= 0.482 af, Atten= 45%, Lag= 256.8 min
 Primary = 0.38 cfs @ 16.58 hrs, Volume= 0.482 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Starting Elev= 448.50' Surf.Area= 1,174 sf Storage= 536 cf
 Peak Elev= 449.48' @ 16.58 hrs Surf.Area= 1,617 sf Storage= 1,899 cf (1,362 cf above start)

Plug-Flow detention time= 410.0 min calculated for 0.470 af (97% of inflow)
 Center-of-Mass det. time= 68.4 min (3,222.6 - 3,154.2)

Volume	Invert	Avail.Storage	Storage Description

Summary for Pond S-17: Underground Infiltration (Sub-Lot 17)

Inflow Area = 0.153 ac, 100.00% Impervious, Inflow Depth = 3.47" for 2 Year - North Salem event
 Inflow = 0.60 cfs @ 12.03 hrs, Volume= 0.044 af
 Outflow = 0.59 cfs @ 12.03 hrs, Volume= 0.044 af, Atten= 1%, Lag= 0.1 min
 Discarded = 0.59 cfs @ 12.03 hrs, Volume= 0.044 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 433.02' @ 12.03 hrs Surf.Area= 0.022 ac Storage= 0.000 af

Plug-Flow detention time= 0.2 min calculated for 0.044 af (100% of inflow)
 Center-of-Mass det. time= 0.1 min (749.9 - 749.7)

Volume	Invert	Avail.Storage	Storage Description
#1A	433.00'	0.013 af	17.75'W x 54.50'L x 2.54'H Field A 0.056 af Overall - 0.016 af Embedded = 0.040 af x 33.3% Voids
#2A	433.50'	0.016 af	Cultec R-150 x 35 Inside #1 Effective Size= 29.8"W x 18.0"H => 2.65 sf x 7.50'L = 19.9 cf Overall Size= 33.0"W x 18.5"H x 8.50'L with 1.00' Overlap
		0.029 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	433.00'	40.000 in/hr Exfiltration over Surface area
#2	Primary	434.50'	4.0" Vert. Orifice/Grate C= 0.600

Discarded OutFlow Max=0.90 cfs @ 12.03 hrs HW=433.02' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 0.90 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=433.00' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond SF-G6: Sand Filter - G6

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth = 1.61" for 2 Year - North Salem event
 Inflow = 3.94 cfs @ 12.42 hrs, Volume= 0.472 af
 Outflow = 0.60 cfs @ 15.18 hrs, Volume= 0.470 af, Atten= 85%, Lag= 165.7 min
 Primary = 0.60 cfs @ 15.18 hrs, Volume= 0.470 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 458.80' @ 15.18 hrs Surf.Area= 4,855 sf Storage= 11,654 cf

Plug-Flow detention time= 2,292.4 min calculated for 0.470 af (100% of inflow)
 Center-of-Mass det. time= 2,291.6 min (3,217.0 - 925.4)

Volume	Invert	Avail.Storage	Storage Description		
#1	456.00'	17,875 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
456.00	3,512	223.0	0	0	3,512
458.00	4,452	248.0	7,945	7,945	4,561

Summary for Pond SF-G7: Sand Filter - G7

Inflow Area = 1.542 ac, 19.58% Impervious, Inflow Depth = 1.61" for 2 Year - North Salem event
 Inflow = 0.85 cfs @ 12.61 hrs, Volume= 0.207 af
 Outflow = 0.22 cfs @ 15.02 hrs, Volume= 0.207 af, Atten= 74%, Lag= 144.7 min
 Primary = 0.22 cfs @ 15.02 hrs, Volume= 0.207 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 450.88' @ 15.02 hrs Surf.Area= 2,421 sf Storage= 5,518 cf

Plug-Flow detention time= 1,763.8 min calculated for 0.207 af (100% of inflow)
 Center-of-Mass det. time= 1,765.9 min (2,664.9 - 898.9)

Volume	Invert	Avail.Storage	Storage Description		
#1	448.00'	8,477 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
448.00	1,452	150.0	0	0	1,452
450.00	2,103	175.0	3,535	3,535	2,176
451.00	2,467	188.0	2,283	5,818	2,593
452.00	2,856	201.0	2,659	8,477	3,040

Device	Routing	Invert	Outlet Devices
#1	Primary	445.50'	12.0" Round Outlet Pipe L= 60.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 442.00' S= 0.0583 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Device 1	448.00'	1.750 in/hr Exfiltration over Surface area above 448.00' Excluded Surface area = 1,452 sf
#3	Device 1	450.85'	36.0" x 36.0" Horiz. Top of Outlet Box C= 0.600 Limited to weir flow at low heads
#4	Secondary	451.00'	10.0' long Emergency Overflow 2 End Contraction(s) 1.0' Crest Height

Primary OutFlow Max=0.22 cfs @ 15.02 hrs HW=450.88' (Free Discharge)
 ↑ 1=Outlet Pipe (Passes 0.22 cfs of 7.37 cfs potential flow)
 ↑ 2=Exfiltration (Exfiltration Controls 0.04 cfs)
 ↑ 3=Top of Outlet Box (Weir Controls 0.18 cfs @ 0.54 fps)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=448.00' (Free Discharge)
 ↑ 4=Emergency Overflow (Controls 0.00 cfs)

Summary for Pond SFF-G5: Sand Filter Forebay - G5

Inflow Area = 2.297 ac, 23.55% Impervious, Inflow Depth = 0.91" for 2 Year - North Salem event
 Inflow = 1.26 cfs @ 12.20 hrs, Volume= 0.174 af
 Outflow = 0.73 cfs @ 12.61 hrs, Volume= 0.174 af, Atten= 42%, Lag= 24.1 min
 Primary = 0.73 cfs @ 12.61 hrs, Volume= 0.174 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 434.28' @ 12.61 hrs Surf.Area= 938 sf Storage= 1,563 cf

Plug-Flow detention time= 37.7 min calculated for 0.174 af (100% of inflow)
 Center-of-Mass det. time= 37.8 min (923.8 - 886.0)

Volume	Invert	Avail.Storage	Storage Description		
#1	432.00'	3,552 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SFF-G6: Sand Filter Forebay - G6

[88] Warning: Qout>Qin may require Finer Routing>1

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth = 1.61" for 2 Year - North Salem event
 Inflow = 3.76 cfs @ 12.30 hrs, Volume= 0.472 af
 Outflow = 3.94 cfs @ 12.42 hrs, Volume= 0.472 af, Atten= 0%, Lag= 7.2 min
 Primary = 3.94 cfs @ 12.42 hrs, Volume= 0.472 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 462.93' @ 12.40 hrs Surf.Area= 2,114 sf Storage= 4,558 cf

Plug-Flow detention time= 67.2 min calculated for 0.472 af (100% of inflow)
 Center-of-Mass det. time= 67.1 min (925.4 - 858.3)

Volume	Invert	Avail.Storage	Storage Description		
#1	460.00'	7,058 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond SFF-G7: Sand Filter Forebay - G7

Inflow Area = 1.542 ac, 19.58% Impervious, Inflow Depth = 1.61" for 2 Year - North Salem event
 Inflow = 1.80 cfs @ 12.21 hrs, Volume= 0.207 af
 Outflow = 0.85 cfs @ 12.61 hrs, Volume= 0.207 af, Atten= 53%, Lag= 23.8 min
 Primary = 0.85 cfs @ 12.61 hrs, Volume= 0.207 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 454.76' @ 12.61 hrs Surf.Area= 1,189 sf Storage= 2,397 cf

Plug-Flow detention time= 46.3 min calculated for 0.207 af (100% of inflow)
 Center-of-Mass det. time= 46.3 min (898.9 - 852.6)

Volume	Invert	Avail.Storage	Storage Description		
#1	452.00'	4,075 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)

Summary for Pond FS G6: Flow Splitter - G6

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth = 3.14" for 10 Year - North Salem event
 Inflow = 8.55 cfs @ 12.29 hrs, Volume= 0.921 af
 Outflow = 8.55 cfs @ 12.29 hrs, Volume= 0.921 af, Atten= 0%, Lag= 0.0 min
 Primary = 4.42 cfs @ 12.29 hrs, Volume= 0.796 af
 Secondary = 4.13 cfs @ 12.29 hrs, Volume= 0.124 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 465.64' @ 12.29 hrs
 Flood Elev= 554.50'

Device	Routing	Invert	Outlet Devices
#1	Primary	463.35'	12.0" Round Outlet to Sand Filter L= 8.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 463.15' S= 0.0250 ' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Secondary	464.79'	24.0" Round Outlet to Dry Basin L= 121.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 453.00' S= 0.0974 ' Cc= 0.900 n= 0.020 Corrugated PE, corrugated interior

Primary OutFlow Max=4.45 cfs @ 12.29 hrs HW=465.63' (Free Discharge)
 ↳1=Outlet to Sand Filter (Inlet Controls 4.45 cfs @ 5.67 fps)

Secondary OutFlow Max=3.47 cfs @ 12.29 hrs HW=465.63' (Free Discharge)
 ↳2=Outlet to Dry Basin (Inlet Controls 3.47 cfs @ 2.76 fps)

Summary for Pond S-21: Underground Infiltration (Sub-Lot 21)

Inflow Area = 0.143 ac, 89.51% Impervious, Inflow Depth = 4.80" for 10 Year - North Salem event
 Inflow = 0.81 cfs @ 12.03 hrs, Volume= 0.057 af
 Outflow = 0.80 cfs @ 12.03 hrs, Volume= 0.057 af, Atten= 0%, Lag= 0.0 min
 Discarded = 0.80 cfs @ 12.03 hrs, Volume= 0.057 af
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs / 2
 Peak Elev= 499.01' @ 12.03 hrs Surf.Area= 0.023 ac Storage= 0.000 af

Plug-Flow detention time= 0.1 min calculated for 0.057 af (100% of inflow)
 Center-of-Mass det. time= 0.1 min (767.2 - 767.1)

Volume	Invert	Avail.Storage	Storage Description
#1A	499.00'	0.012 af	25.00'W x 39.50'L x 2.04'H Field A 0.046 af Overall - 0.011 af Embedded = 0.035 af x 33.3% Voids
#2A	499.50'	0.011 af	Cultec C-100 x 35 Inside #1 Effective Size= 32.1"W x 12.0"H => 1.86 sf x 7.50'L = 14.0 cf Overall Size= 36.0"W x 12.5"H x 8.00'L with 0.50' Overlap
		0.023 af	Total Available Storage

Storage Group A created with Chamber Wizard

Device	Routing	Invert	Outlet Devices
#1	Discarded	499.00'	60.000 in/hr Exfiltration over Surface area
#2	Primary	500.50'	4.0" Vert. Orifice/Grate C= 0.600

Discarded OutFlow Max=1.37 cfs @ 12.03 hrs HW=499.01' (Free Discharge)
 ↑1=Exfiltration (Exfiltration Controls 1.37 cfs)

Primary OutFlow Max=0.00 cfs @ 0.00 hrs HW=499.00' (Free Discharge)
 ↑2=Orifice/Grate (Controls 0.00 cfs)

Summary for Pond SF-G5: Sand Filter - G5

Inflow Area = 2.297 ac, 23.55% Impervious, Inflow Depth = 1.67" for 10 Year - North Salem event
 Inflow = 1.26 cfs @ 12.62 hrs, Volume= 0.319 af
 Outflow = 0.81 cfs @ 13.35 hrs, Volume= 0.319 af, Atten= 36%, Lag= 44.0 min
 Primary = 0.81 cfs @ 13.35 hrs, Volume= 0.319 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 430.97' @ 13.35 hrs Surf.Area= 1,950 sf Storage= 4,437 cf

Plug-Flow detention time= 873.8 min calculated for 0.319 af (100% of inflow)
 Center-of-Mass det. time= 873.7 min (1,795.8 - 922.1)

Volume	Invert	Avail.Storage	Storage Description		
#1	428.00'	6,629 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
428.00	1,095	136.0	0	0	1,095

Summary for Pond SF-G6: Sand Filter - G6

Inflow Area = 3.518 ac, 19.41% Impervious, Inflow Depth = 2.72" for 10 Year - North Salem event
 Inflow = 4.42 cfs @ 12.31 hrs, Volume= 0.796 af
 Outflow = 2.34 cfs @ 12.89 hrs, Volume= 0.795 af, Atten= 47%, Lag= 34.9 min
 Primary = 2.34 cfs @ 12.89 hrs, Volume= 0.795 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 458.87' @ 12.89 hrs Surf.Area= 4,895 sf Storage= 12,027 cf

Plug-Flow detention time= 1,389.3 min calculated for 0.795 af (100% of inflow)
 Center-of-Mass det. time= 1,387.2 min (2,296.4 - 909.2)

Volume	Invert	Avail.Storage	Storage Description		
#1	456.00'	17,875 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
456.00	3,512	223.0	0	0	3,512
458.00	4,452	248.0	7,945	7,945	4,561

Summary for Pond SF-G7: Sand Filter - G7

Inflow Area = 1.542 ac, 19.58% Impervious, Inflow Depth = 2.71" for 10 Year - North Salem event
 Inflow = 1.97 cfs @ 12.37 hrs, Volume= 0.348 af
 Outflow = 0.84 cfs @ 13.12 hrs, Volume= 0.348 af, Atten= 58%, Lag= 45.4 min
 Primary = 0.84 cfs @ 13.12 hrs, Volume= 0.348 af
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af

Routing by Stor-Ind method, Time Span= 0.00-300.00 hrs, dt= 0.05 hrs
 Peak Elev= 450.92' @ 13.12 hrs Surf.Area= 2,438 sf Storage= 5,631 cf

Plug-Flow detention time= 1,075.2 min calculated for 0.348 af (100% of inflow)
 Center-of-Mass det. time= 1,077.4 min (1,965.0 - 887.6)

Volume	Invert	Avail.Storage	Storage Description		
#1	448.00'	8,477 cf	Custom Stage Data (Irregular) Listed below (Recalc)		
Elevation (feet)	Surf.Area (sq-ft)	Perim. (feet)	Inc.Store (cubic-feet)	Cum.Store (cubic-feet)	Wet.Area (sq-ft)
448.00	1,452	150.0	0	0	1,452
450.00	2,103	175.0	3,535	3,535	2,176
451.00	2,467	188.0	2,283	5,818	2,593
452.00	2,856	201.0	2,659	8,477	3,040

Device	Routing	Invert	Outlet Devices
#1	Primary	445.50'	12.0" Round Outlet Pipe L= 60.0' CPP, mitered to conform to fill, Ke= 0.700 Outlet Invert= 442.00' S= 0.0583 '/' Cc= 0.900 n= 0.010 PVC, smooth interior
#2	Device 1	448.00'	1.750 in/hr Exfiltration over Surface area above 448.00' Excluded Surface area = 1,452 sf
#3	Device 1	450.85'	36.0" x 36.0" Horiz. Top of Outlet Box C= 0.600 Limited to weir flow at low heads
#4	Secondary	451.00'	10.0' long Emergency Overflow 2 End Contraction(s) 1.0' Crest Height

Primary OutFlow Max=0.82 cfs @ 13.12 hrs HW=450.92' (Free Discharge)
 ↑ **1=Outlet Pipe** (Passes 0.82 cfs of 7.40 cfs potential flow)
 ↑ **2=Exfiltration** (Exfiltration Controls 0.04 cfs)
 ↑ **3=Top of Outlet Box** (Weir Controls 0.78 cfs @ 0.89 fps)

Secondary OutFlow Max=0.00 cfs @ 0.00 hrs HW=448.00' (Free Discharge)
 ↑ **4=Emergency Overflow** (Controls 0.00 cfs)
